The prevalence of childhood obesity is so high in the United States that it may reduce the life expectancy of today's generation of children. While parents and other adult caregivers play a fundamental role in teaching

children about healthy behaviors, even the most positive efforts can be undermined by local environments that are poorly suited to supporting healthy behaviors. For example, many communities lack ready sources of healthy food choices, such as supermarkets and grocery stores. Or they may not provide safe places for children to walk or play. In such communities, even the most motivated child or adolescent may find it difficult to act in healthy ways. Local governments-with jurisdiction over many aspects of land use, food marketing, community planning, transportation, health and nutrition programs, and other community issues-are ideally positioned to promote behaviors that will help children and adolescents reach and maintain healthy weights. Local Government Actions to

Prevent Childhood Obesity presents a number of recommendations that touch on the vital role of government actions on all levels-federal, state, and local-in childhood obesity prevention. The book offers healthy eating and physical activity strategies for local governments to consider, making it an excellent resource for mayors, managers, commissioners, council members, county board members, and administrators.

Colonel Mike Hoare led 300 'Wild Geese' across the Congo to crush a communist rebellion, rescue 2000 nuns and priests from barbarity, beat Che Guevara ... and become a legend. Of Irish blood, Mike was

schooled in England and, during World War 2, was the 'best bloody soldier in the British Army'. He demobbed as major, qualified in London as a chartered accountant and emigrated to South Africa. Going rogue, he started living dangerously to get more out of life, including trans-Africa motorbike trips, bluewater sailing, exploring remote areas, and leading safaris in the Kalahari Desert. Here Mike got to know the CIA agent who was to change his life ... and who was to stop Nelson Mandela's. Later Mike was technical advisor to the film The Wild Geese, which starred Richard Burton playing the Mike Hoare character. In 1981 Mike led 50 'Frothblowers' in a bid to depose the socialist government of the Seychelles. Things went wrong and soon Mike was to spend three years in jail for hijacking a Boeing 707. In this, the story behind the story - rich in new material - Mike's son Chris separates the man from the myth in a way only a son can, and concludes his 'mad dad' was an officer and a gentleman with a bit of pirate thrown in.

In this IBM® Redguide™ document, we highlight the key requirements for a smarter data center network and show how the data center fabric, a new switching architecture, provides the required

performance, scalability, and management. We explore Juniper Networks' QFabric, a revolutionary DCN fabric product, and describe how its characteristics and key network innovations provide real business value in rapid service deployment, cost-efficient service delivery, energy efficiency, and business resiliency and security. We examine Juniper's QFabric design, product software, hardware, and deployment, and illustrate how QFabric can drastically improve your DCN while reducing your business costs. We describe three common QFabric network use cases that highlight fundamental changes in DCN architecture. Use cases are based on our project experiences, specifically optimized application delivery control, secure isolation provisioning of a multi-tenant environment, and support of business continuity. IBM understands that the first step in transforming network infrastructure is developing an enterprise network architecture that considers business and IT environments, security and privacy policies, service priorities, and growth plans. This guide describes how to migrate to a smarter data center using QFabric and also considers organizational aspects of migration. Over decades, IBM has built deep technical expertise and understanding of the evolving demands of network, server, storage, and desktop virtualization. IBM has extensive design and integration experience in complex DCN infrastructures and cloud computing environments. And IBM has a global pool of skilled networking professionals with in-depth IT and networking infrastructure knowledge and world class project management skills. IBM and Juniper Networks' strong partnership offers leading edge network products and technologies that will help you create and implement this unrivalled DCN design using the information covered in this paper.

A hands-on book which begins by setting the context;- defining

'fermentation' and the possible uses of fermenters, and setting the scope for the book. It then proceeds in a methodical manner to cover the equipment

for research scale fermentation labs, the different types of fermenters

available, their uses and modes of operation. Once the lab is equipped, the

issues of fermentation media, preservation strains and strain improvement

strategies are documented, along with the use of mathematical modelling as a

method for prediction and control. Broader questions such as scale-up and

scale down, process monitoring and data logging and acquisition are

discussed before separate chapters on animal cell culture systems and plant

cell culture systems. The final chapter documents the way forward for

fermenters and how they can be used for non-manufacturing purposes. A

glossary of terms at the back of the book (along with a subject index) will

prove invaluable for quick reference. Edited by academic consultants who

have years of experience in fermentation technology, each chapter is

authored by experts from both industry and academia. Industry authors

come from GSK (UK), DSM (Netherlands), Eli Lilly (USA) and Broadley

James (UK-USA).

A Critical Study of Nullification in South Carolina IBM Redbooks

Micro-assembly is a key enabling technology for cost effective

manufacture of new generations of complex micro products. It is also a

critical technology for retaining industrial capabilities in high labour

cost areas such as Europe since up to 80% of the production cost in some industries is attributed directly to assembly processes. With the continuous trend for product miniaturisation, the scientific and technological developments in micro-assembly are expected to have a significant long-term economic, demographic and social impact. A distinctive feature of the process is that surface forces are often dominant over gravity forces, which determines a number of specific technical challenges. Critical areas which are currently being addressed include development of assembly systems with high positional accuracy, micro gripping methods that take into account the adhesive surface forces, high precision micro-feeding techniques and micro-joining processes. Micro-assembly has developed rapidly over the last few years and all the predictions are that it will remain a critical technology for high value products in a number of key sectors such as healthcare, communications, defence and aerospace. The key challenge is to match the significant technological developments with a new generation of micro products that will establish firmly micro-assembly as a core manufacturing process.

Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after

'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

The inflorescence of the monoecious maize plant is unique among the Gramineae in the sharp separation of the male and female structures. The male tassel at the terminus of the plant most often sheds pollen before the visual appearance of the receptive silks of the female ear at a lateral bud, normally at the 10 leaf [1]. Earlier studies examined the ontogeny of the growing tissues beginning with the embryo in the kernel through to the obvious protuberances of the growing point as the kernel germinates. The differentiated developing soon-to-become tassel and the lateral bulges that develop into the ears on the lateral buds become apparent very early in the

germinating kernel [2, 3, 46]. A certain number of cells are destined for tassel and ear development [8]. As the plant develops, there is a phase transition [3, 16] from the vegetative lateral buds to the reproductive lateral buds. This change in phase has been ascribed to genotypic control as evidenced in the differences among different genotypes in the initiation of the reproductive [1]. The genetic control of tassel and ear initiation has been gleaned from anatomical observations. Lejeune and Bernier [12] found that maize plants terminate the initiation of additional axillary meristems at the time of tassel initiation. This would indicate that the top-most ear shoot is initiated on the same day as the initiation of tassel development and this event signals the end of the undifferentiated growing point.
