As a recent Navy retiree, Chito Pepler wanted to do something different. He attended George Washington University to earn an MBA and left with a diploma, and with a food tech startup called RUNINOut. After running his company for five years, he had saturated the local market. Hosting meetups was too time consuming, so it was time to take RUNINOut on the road. What better way to do that than to become a truck driver and make some money on the side. He attended trucking school in Middletown, VA and spent many nights sleeping in my car near the foothills of the Shenandoah. Then during a period of a year and a half, he worked for three different companies and picked up the requisite skills to be an over-the-road trucker. He then decided to purchase his own truck and drive power only pulling other people's trailers. But before starting his trucking company, he would attend diesel tech training at North American Trade Schools in Baltimore, MD. Trucking in a semi truck is living the good life. No boring meetings, No pesky bosses to haggle you.

And when you get tired of the scenery, you just get up and go. Would Chito find life fun and exciting? Or would there be hazards and dangers in the road ahead?

The Law Library presents the complete text of the Service Performance Measurement (US Postal Regulatory Commission Regulation) (PRC) (2018 Edition). Updated as of May 29, 2018 The Commission is adopting a final rule on service performance measurement and customer satisfaction. The final rule reflects the Commission's consideration of comments on a proposed rule. Adoption of the final rule helps give effect to

provisions in a 2006 federal law which, among other things, sought to increase Postal Service accountability. The Commission recognizes that exceptions from, and temporary waivers of, some reporting requirements may be appropriate. The discussion makes clear that these matters may be pursued in separate follow-up rulemakings initiated by the Postal Service. This ebook contains: - The complete text of the Service Performance Measurement (US Postal Regulatory Commission Regulation) (PRC) (2018 Edition) - A dynamic table of content linking to each section - A table of contents in introduction presenting a general overview of the structure

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge

and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these

changes combine to produce optimal flow velocity through the engine for maximum power.

Until recently, the complexity of the Diesel Particulate Filter (DPF) system has hindered its commercial success. Stringent regulations of diesel emissions has led to advancements in this technology, therefore mainstreaming the use of DPFs in light- and heavy-duty diesel filtration applications. This book covers the latest and most important research in DPF systems, focusing mainly on the advancements of the years 2002-2006. Editor Timothy V. Johnson selected the top 29 SAE papers covering the most

significant research in this technology.
