"Nadja, " originally published in France in 1928, is the first and perhaps best Surrealist romance ever written, a book which defined that movement's attitude toward everyday life. The principal narrative is an account of the author's relationship with a girl in teh city of Paris, the story of an obsessional presence haunting his life. The first-person narrative is supplemented by forty-four photographs which form an integral part of the work -- pictures of various "surreal" people, places, and objects which the author visits or is haunted by in naja's presence and which inspire him to mediate on their reality or lack of it. "The Nadja of the book is a girl, but, like Bertrand Russell's definition of electricity as "not so much a thing as a way things happen, " Nadja is not so much a person as the way she makes people behave. She has been described as a state of mind, a feeling about reality, k a kind of vision, and the reader sometimes wonders whether she exists at all. yet it is Nadja who gives form and structure to the novel.

Jury Instructions on Products Liability Dundurn

Over the last few years, IBM® IMSTM and IMS tools have been modernizing the interfaces to IMS and the IMS tools to bring them more in line with the current interface designs. As the mainframe software products are becoming more integrated with the Windows and mobile environments, a common approach to interfaces is becoming more relevant. The traditional 3270 interface with ISPF as the main interface is no longer the only way to do some of these processes. There is also a need to provide more of a common looking interface so the tools do not have a product-specific interface. This allows more cross product integration. Eclipse and web-based interfaces being used in a development environment, tooling using those environments provides productivity improvements in that the interfaces are common and familiar. IMS and IMS tools developers are making use of those environments to provide tooling that will perform some of the standard DBA functions. This book will take some selected processes and show how this new tooling can be used. This will provide some productivity improvements and also provide a more familiar environment for new generations DBAs. Some of the functions normally done by DBA or console operators can now be done in this eclipse-based environment by the application developers. This means that the need to request these services from others can be eliminated. This IBM Redbooks® publication examines specific IMS DBA processes and highlights the new IMS and IMS tools features, which show an alternative way to accomplish those processes. Each chapter highlights a different area of the DBA processes like: PSB creation Starting/stopping a database in an IMS system Recovering a database Cloning a set of databases
