The Book of R is a comprehensive, beginner-friendly guide to R, the world's most popular programming language for statistical analysis. Even if you have no programming experience and little more than a grounding in the basics of mathematics, you'll find everything you need to begin using R effectively for statistical analysis. You'll start with the basics, like how to handle data and write simple programs, before moving on to more advanced topics, like producing statistical summaries of your data and performing statistical tests and modeling. You'll even learn how to create impressive data visualizations with R's basic graphics tools and contributed packages, like `ggplot2` and `ggvis`, as well as interactive 3D visualizations using the `rgl` package. Dozens of hands-on exercises (with downloadable solutions) take you from theory to practice, as you learn: –The fundamentals of programming in R, including how to write data frames, create functions, and use variables, statements, and loops –Statistical concepts like exploratory data analysis, probabilities, hypothesis tests, and regression modeling, and how to execute them in R –How to access R's thousands of functions, libraries, and data sets –How to draw valid and useful conclusions from your data –How to create publication-quality graphics

of your results Combining detailed explanations with real-world examples and exercises, this book will provide you with a solid understanding of both statistics and the depth of R's functionality. Make *The Book of R* your doorway into the growing world of data analysis.

The devices described in "Advanced MOS-Gated Thyristor Concepts" are utilized in microelectronics production equipment, in power transmission equipment, and for very high power motor control in electric trains, steel-mills, etc. Advanced concepts that enable improving the performance of power thyristors are discussed here, along with devices with blocking voltage capabilities of 5,000-V, 10,000-V and 15,000-V. Throughout the book, analytical models are generated to allow a simple analysis of the structures and to obtain insight into the underlying physics. The results of two-dimensional simulations are provided to corroborate the analytical models and give greater insight into the device operation.

th This book contains papers accepted for  
presentation at the 4 International  
Conference on Computer Recognition  
Systems CORES'05, May 22-25, 2005,  
Rydzyzna Castle (Poland), This conference  
is a continuation of a series of con  
ferences on similar topics (KOSYR)  
organized each second year, since 1999,  
by the Chair of Systems and Computer  
Networks, Wroclaw University of Tech  
nology. An increasing interest to those  
conferences paid not only by home but  
also by foreign participants inspired the  
organizers to transform them into  
conferences of international range. Our  
expectations that the community of  
specialists in computer recognizing  
systems will find CORES'05 a proper form  
of maintaining the tradition of the former  
conferences have been confirmed by a  
large number of submitted papers. Alas,  
organizational constraints caused a  
necessity to narrow the acceptance criteria  
so that only 100 papers have been finally  
included into the conference program. The  
area covered by accepted papers is still  
very large and it shows how vivacious is  
scientific activity in the domain of computer  
recognition methods and systems. It  
contains vari ous theoretical approaches to  
the recognition problem based on  
mathematical statistics, fuzzy sets,

---

morphological methods, wavelets, syntactic methods, genetic algorithms, artificial neural networks, ontological models, etc. Most attention is still paid to visual objects recognition; however, acoustic, textual and other objects are also considered. Among application areas medical problems are in majority; recognition of faces, speech signals and textual information processing methods being also investigated.

The International Conference on Environmental Awareness for Sustainable Development (ICEASD) 2019 aims at discussing areas where problems and potential risks regarding

environmental sustainability. Human Security factors play different roles in relationship to environmental sustainability and this conference will highlight the role of these factors. The conference hold in Kendari, Indonesia and it provide an opportunity for researchers to communicate how to highlight and bring attention to these issues such as in education through various interdisciplinary courses. This conference invites specialists in environmental issues, researchers, academicians, policy makers, innovators and practitioners from around the world to participate in ICEASD 2019. The International Conference on Challenges and Opportunities of Sustainable Environmental Development (ICCOSED) publish papers and special issues on specific topics of interest to international audiences of environmental researchers. This conference is held by Universitas Prof. Dr. Moestopo Beragama and Majelis Sinergi Kalam Ikatlan Cendekiawan Muslim Se-Indonesia (MASIKA ICMI). The conference publishes original research from throughout the world dealing with education, Social sciences, and environmental science. The editorial team makes every effort to cut the review and, when necessary, revision time periods as short as possible in order to help the research community publish and disseminate their works quickly. These efforts, however, depend heavily on authors' compliance with ethical rules and the journal's guidelines before submitting their works. Also, the voluntary reviewers from around the world with expertise in

---

specific fields devote their precious time in order to provide quality feedback to authors. Yet, their time dedicated to improve the authors' articles is not unlimited. Often they appropriate from their personal times to do this voluntary work.
