If the sequence is played ascending, then the first virtual pitch tends to be perceived, whereas if played descending, the second, lower virtual pitch tends to be heard. Only one virtual pitch is

audible at a time. This can be heard in sound examples [S: 6] and [S: 7].  Pitch and virtual
 pitch are
 properties of a
 single sound.
 For instance, a
 chord played by
 the violin, viola,
 and cello of a
 string quartet is
 not usually thou
 ght of as having a pi
 tch; rather, pitch is
 associated with ea
 ch instrumental
 tone separately.
 Thus,
 determining the
 pitch or pitches
 of a complex
 sound source
 requires that it
 ?rst be
 partitioned into
 separate
 perceptual
 entities. Only

when a cluster of
 partials fuse into
 a single sound
 can it be
 assigned a pitch.
 When listening
 analytically, for
 instance, there
 may be more
 " notes " present
 than in the same so
 und when listenin
 g holistically.
