A destitute tenant farmer, in Pyung Yang, Korea, gives away his twelve year old son to the nationalist patriot, Doh Sahn, in 1908. Following the ardent Patriot, thrusts the teenager into the midst of an international struggle raging in the Korean Peninsula. Japan proceeds to annex Korea into the Japanese Empire. The Patriot fights to thwart the annexation. As the Japanese police close in, the Patriot and the teenager escape to Tsingtao and Vladivostok; the two finally reach New York in 1911, as Korea is no more. The teenager struggles alone to survive in America, and enters Asbury College in Kentucky. Rev. Robert Nahm-Soo Chung in 1926 returns to his homeland. His Evangelistic Crusade Team carries a huge tent of six thousand capacity, on a van-truck provided by American campgrounds and

churches. The Team travels even to the remote areas of the Peninsula. He preaches to the throngs suffering under the Japanese, during their darkest hours. Hundreds of thousands of people come to Jesus. He suffers torture in the Japanese prison, for preaching the gospel, and for his close tie with the Patriot. You will walk through his tears and triumphs to preach the gospel. Paul M. Chung, PH.D, is a retired engineering Professor and Dean Emeritus of an engineering college.

In 1973, conventional industry wisdom was that a country music station could not be successful in the New York market. WHN ignored that wisdom and announced that it was switching from a middle-of-the-road format to country, billing itself as "Easy Lovin' Country." The actual changeover took place at 5:45 am on February 26th when Jack Spector, calling himself "The Kosher Cowboy From Coney Island," introduced the George Jones classic "The Race Is On." And the rest is history.

BEGINNING ALGEBRA: CONNECTING CONCEPTS THROUGH APPLICATIONS shows students how to apply traditional mathematical skills in real-world contexts. The emphasis on skill building and applications engages students as they master algebraic

concepts, problem solving, and communication skills. Students learn how to solve problems generated from realistic applications, instead of learning techniques without conceptual understanding. The authors have developed several key ideas to make concepts real and vivid for students. First, they emphasize strong algebra skills. These skills support the applications and enhance student comprehension. Second, the authors integrate applications, drawing on realistic data to show students why they need to know and how to apply math. The applications help students develop the skills needed to explain the meaning of answers in the context of the application. Third, the authors develop key concepts as students progress through the course. For example, the distributive property is introduced in real numbers, covered when students are learning how to multiply a polynomial by a constant, and finally when students learn how to multiply a polynomial by a monomial. These concepts are reinforced through applications in the text. Last, the authors' approach prepares students for intermediate algebra by including an introduction to material such as functions and interval notation as well as the last chapter that covers linear and quadratic modeling.
