The Confident Mom Delmar Pub

Machining is an essential part of high-

performance engine building and stock

rebuilding, as well as certain servicing

procedures. Although you may not own the

expensive tooling and machining to perform all

or any of the machining required for a quality

build, you need to understand the principles,

procedures, and goals for machining, so you can

guide the machining process when outsourced.

Classic and older engines typically require

extensive machining and almost every major

component of engine, including block, heads,

intake, crankshaft, and pistons, require some sort

of machining and fitment. A detailed,

authoritative, and thorough automotive engine-

machining guide for the hard-core enthusiast has

not been available until now. Mike Mavrigian,

editor of Engine Building Professional, walks you

through each important machining procedure. A

stock 300-hp engine build has far different

requirements than a 1,000-hp drag race engine,

and Mavrigian reveals the different machining

procedures and plans according to application

and engine design. The author also shows you

how to inspect, measure, and evaluate

components so you can provide astute guidance

and make the best machine work choices.

Machining procedures included are cylinder

boring, align boring/honing, decking, valveseat

cutting, cam tunnel boring, and a multitude of

other services. In addition, multi-angle valve

jobs, setting the valveseats, altering rocker arm

ratio, re-conditioning connecting rods, and

machining and matching valvetrain components

are also covered. Whether you're an enthusiast

engine builder or prospective machining student

who wants to pursue a career as an automotive

machinist, this book will provide insight and in-

depth instruction for performing the most
common and important machining procedures.
