For decades there have been two iconic Japanese auto companies. One has been endlessly studied and written about. The other has been generally underappreciated and misunderstood. Until now. Since its birth as a motorcycle company in 1949, Honda has steadily grown into the world's fifth largest automaker and top engine manufacturer, as well as one of the most beloved, most profitable, and most consistently innovative multinational corporations. What drives the company that keeps creating and improving award-winning and bestselling models like the Civic, Accord, Odyssey, CR-V, and Pilot? According to Jeffrey Rothfeder - the first journalist allowed behind Honda's infamously private doors - what truly distinguishes Honda from its competitors, especially archrival Toyota, is a deep commitment to a set of unorthodox management tenets. The Honda Way, as insiders call it, is notable for decentralization over corporate control, simplicity over complexity and unyielding cynicism toward the status quo and whatever is assumed to be the truth - ideas embedded in the DNA of the company by its colourful founder Soichiro Honda, sixty-five years ago. With dozens of interviews of Honda executives, engineers, and frontline employees, Rothfeder shows how the company has developed and maintained its unmatched culture of innovation, resilience, and flexibility - and how it exported that culture to other countries that are strikingly different from Japan, establishing locally controlled operations in each region where it lays down roots. For instance, Rothfeder reports on life at a Honda factory in the tiny town of Lincoln, Alabama. When the American workers were trained to follow the Honda Way as a self-sufficient outpost of the global company, their plant pioneered a new model for manufacturing in America. As Soichiro Honda himself liked to say, "Success can be achieved only through repeated failure and introspection. In fact, success represents one percent of your work, which results only from the ninety-nine percent that is called failure."

In 1956, a prototype of a new passenger car from Volvo was presented. It became known as the Amazon in Sweden and the 121 and 122S in export markets, the latter denoting a more sporty derivative. However, despite its substantial appearance, all Amazons were surprisingly fleet of foot - this was one of the most sporty European saloons of the 1960s. With its elegant, timeless styling the Amazon broke new ground for Volvo - and for passenger cars as a whole. This new book covers the complete story of the Volvo Amazon, from 1956 onwards, including full production histories, comprehensive specification details, and over 250 photographs. The book covers the history of Volvo before and after the Amazon, and development and production of all Amazon derivatives from 1956-1970, including the 121, 122S, 123GT and all of the estate editions. There are biographies of key Volvo personnel, including the company's first designer, Jan Wilsgaard. Also included is the Amazon in motorsport, plus driver biographies: Tom Trana, Sylvia Osterberg and Carl-Magnus Skogh. There is a full buying guide along with tips on tuning and modifying, including rally preparation, and an insight into what the press thought of each Amazon derivative, with pages also devoted to how the car was marketed in period. An ideal resource for owners, or anyone with an interest in the evolution of these classic cars, which is superbly illustrated with 250 colour photographs.

The economies of South Korea and Taiwan in the second half of the twentieth century are to scholars of economic development what the economy of Britain in the late eighteenth and early nineteenth centuries is to economic historians. This book, first published in 2006, is a collaboration between a leading trade economist and a leading economic sociologist specializing in East Asia, and offers an explanation of the development paths of post-World War II Korea and Taiwan. The ambitions of the authors go beyond this, however. They use these cases to reshape the way economists, sociologists, and political scientists will think about economic organization in the future. They offer nothing less than a theory of, and extended evidence for, how capitalist economies become organized. One of the principal empirical findings is that a primary cause for the industrialization of East Asia is the retail revolution in the United States and the demand-responsiveness of Asian manufacturers.
