Catalyst Deactivation 1994 was an expansion of earlier, highly successful symposia. The objective of the symposium was to promote a scientific approach of the phenomenon of catalyst deactivation which will contribute to the development of catalysts which are less subject to structural transformations and more resistant to poisons and coke formation. These aspects are dealt with in 12 plenary lectures, 48 oral presentations and 35 poster papers, which were critically selected from an impressive response from some 30 countries. Both fundamental and applied aspects were covered. The deactivation of catalysts in important industrial processes like fluid bed catalytic cracking hydrotreatment, hydrodesulfurization, catalytic reforming, hydrodenitrogenation, steam reforming, hydrodemetallization, hydrocracking, Fischer-Tropsch synthesis, propane dehydrogenation, phthalic anhydride synthesis received considerable attention. Mechanisms of poisoning, sintering and coking were further investigated and modelled and new experimental techniques for the characterization and the quantification of deactivation were also introduced.

This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal.

Diesel-Engine Management John Wiley & Sons

Britain is in the midst of a fierce battle over government spending. With debts mounting rapidly, the ?700 billion annual bill is no longer sustainable. But cuts face a wall of opposition, with dire warnings that they will ravage our society: hospital waiting lists will grow, schools will close and the poor will tumble into a new Dickensian abyss. Yet much of what the government currently spends is wasted, and public sector performance is often woeful. In Burning Our Money, Mike Denham casts a critical eye over the services we receive for our hard-earned cash, and finds them radically - often shockingly - wanting. For all the media insistence that the NHS is 'the envy of the world', it stacks up poorly against European healthcare systems. For all our apparently soaring exam grades, our children significantly underperform their future competitors in China, Korea and elsewhere. And for all our hand-wringing about abolishing poverty, our huge welfare system actually damages many of the poor it's supposed to help. Drawing on extensive research and up-to-the-minute reporting, Burning Our Money comprehensively debunks the myth that more public spending means better public services, and shows how we can - and must - get more for less.
