Blizoid is a playful term, for how one feels when turning, or having turned. Wasted would be the same thing. It's that envious, coveted state of mind one hopes to reach by turning. There is a level of ThC buildup in the bloodstream, in which short term memory cells function at that final time, but are wiped clean of recall later. Alcohol achieves a similar effect on memory, at certain blood levels. Another suspect of memory disfunction, would be Post Traumatic Stress Disorder, and frontal lobe epilepsy. "We're burning braincells, man," would have been a good joke to laugh at, if it weren't so accurate, at certain blood levels in the brain, so far as is undefined. The pot of gold we were all seeking in the 60s and 70s, was that awareness of the sanctity of all things, either living or inanimate.

This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.
