Wouldn't it be great if there were a physics book that showed you how things work instead of telling you how? Finally, with Head First Physics, there is. This comprehensive book takes the stress out of learning mechanics and practical physics by providing a fun and engaging experience, especially for students who "just don't get it."

Head First Physics offers a format that's rich in visuals and full of activities, including pictures, illustrations, puzzles, stories, and quizzes -- a mixed-media style proven to stimulate learning and retention. One look will convince you: This isn't mere theory, this is physics brought to life through real-world scenarios, simple experiments, and hypothetical projects. Head First Physics is perfect for anyone who's intrigued by how things work in the natural world. You'll quickly discover that physics isn't a dry subject. It's all about the world we live in, encompassing everything from falling objects and speeding cars, to conservation of energy and gravity and weightlessness, and orbital behavior. This book: Helps you think like a physicist so you can understand why things really work the way they do Gives you relevant examples

so you can fully grasp the principles before moving on to more complex concepts
Designed to be used as a supplement study guide for the College Board's Advanced Placement Physics B Exam
Introduces principles for the purpose of solving real-world problems, not memorization
Teaches you how to measure, observe, calculate -- and yes -- how to do the math
Covers scientific notation, SI units, vectors, motion, momentum conservation, Newton's Laws, energy conservation, weight and mass, gravitation and orbits, circular motion and simple harmonic motion, and much more
If "Myth Busters" and other TV programs make you curious about our physical world -- or if you're a student forced to take a physics course -- now you can pursue the subject without the dread of boredom or the fear that it will be over your head.
Head First Physics comes to rescue with an innovative, engaging, and inspirational way to learn physics!

Agatha Christie is the world's
most popular writer in modern
times and her books have only
been outsold by the Bible and
Shakespeare. Best remembered
for such classic crime novels as
Murder on the Orient Express,
And Then There Were None,
and Death on the Nile, her
works have been cherished by
generations of readers. Christie,
however, was also a master of
the shorter crime story and this
volume collects some of her

finest short stories. Each of these
thirty-nine stories features one of
Christie's famous detectives -
Miss Marple, Hercule Poirot,
Parker Pyne, and Harley Quin -
in some of their most baffling
and intriguing cases, as these
ingenious Christie tales show
how satisfying and compelling
the crime short story can be.
