Agatha Christie is the world's most popular writer in modern times and her books have only been outsold by the Bible and Shakespeare. Best remembered for such classic crime novels as Murder on the Orient Express, And Then There Were None, and Death on the Nile, her works have been cherished by generations of readers. Christie, however, was also a master of the shorter crime story and this volume collects some of her finest short stories. Each of these thirty-nine stories features one of Christie's famous detectives - Miss Marple, Hercule Poirot, Parker Pyne, and Harley Quin - in some of their most baffling and intriguing cases, as these ingenious Christie tales show how satisfying and compelling the crime short story can be.

Bioprocess Engineering involves the design and development of equipment and processes for the manufacturing of products such as food, feed, pharmaceuticals, nutraceuticals, chemicals, and polymers and paper from biological materials. It also deals with studying various biotechnological processes. "Bioprocess Kinetics and Systems Engineering" first of its kind contains systematic and comprehensive content on

bioprocess kinetics, bioprocess systems, sustainability and reaction engineering. Dr. Shijie Liu reviews the relevant fundamentals of chemical kinetics-including batch and continuous reactors, biochemistry, microbiology, molecular biology, reaction engineering, and bioprocess systems engineering-introducing key principles that enable bioprocess engineers to engage in the analysis, optimization, design and consistent control over biological and chemical transformations. The quantitative treatment of bioprocesses is the central theme of this book, while more advanced techniques and applications are covered with some depth. Many theoretical derivations and simplifications are used to demonstrate how empirical kinetic models are applicable to complicated bioprocess systems. Contains extensive illustrative drawings which make the understanding of the subject easy. Contains worked examples of the various process parameters, their significance and their specific practical use. Provides the theory of bioprocess kinetics from simple concepts to complex metabolic pathways. Incorporates sustainability concepts into the various bioprocesses.

Now revised and updated, this book tells the story of how the automobile transformed American life and how automotive design and technology have changed over time. It details cars' inception as a mechanical curiosity and later a plaything for the wealthy; racing and the promotion of the industry; Henry Ford and the advent of mass production; market competition during the 1920s; the development of roads and accompanying highway

culture; the effects of the Great Depression and World War II; the automotive Golden Age of the 1950s; oil crises and the turbulent 1970s; the decline and then resurgence of the Big Three; and how American car culture has been represented in film, music and literature. Updated notes and a select bibliography serve as valuable resources to those interested in automotive history. Haynes Manuals N. America, Incorporated
