This book highlights a range of perspectives concerning the economic and social impact of microfinance products (especially microcredit) on their clients ' lives, scientifically analysing four distinct impact levels: namely, the individual level, the household level, the enterprise level, and the community level. Microcredit services enable low income people to move their family away from poverty and towards higher living standards, by increasing their business activity, improving their employment opportunities, and contributing to sustainable economic growth and development. Investigating the Albanian market, by assessing the impact of Albanian microfinance programs at each of the four above-mentioned impact levels, this book explores whether being a client of MFIs microfinance programmes brings positive changes to their lives and their community. The book uses various data collection techniques, such as surveys, interviews, quantitative measurements of financial data, and data processing methodologies including paired t-tests and a comparison-based data analysis methodology using a control group in order to support or reject the above hypothesis.

Statistics Pearson

In the phase transitions among the solid, liquid, and gaseous forms of water, we see a profound demonstration of how properties at the molecular scale dictate the behavior of the bulk material. As ice is heated beyond its melting

point, new avenues for molecular motion become open to the energy being added. Upon entering the gas phase, the water molecules can explore new territory, unavailable to the liquid or solid. These transformations can be seen as a shifting balance between the forces that bind the molecules and the thermal energy that excites these motions--a window through thermodynamics on the intricate mechanisms that drive chemistry.
