Six themes are used to organize indicators—world view, people, environment, economy, states and markets, and global links. As in past editions, World Development Indicators reviews global progress toward the Millennium Development Goals (MDGs) and provides key indicators related to poverty. WDI 2015 includes: * A selection of the most popular indicators across 214 economies and 14 country groups organized into six WDI themes * Thematic and regional highlights, providing an overview of global

development trends * An in-depth review of the progress made toward achieving the Millennium Development Goals * A user guide describing resources available online and on mobile apps A complementary online data analysis tool is available this year to allow readers to further investigate global, regional, and country progress on the MDGs: data.worldbank.org/mdgs. Each of the remaining sections includes an introduction; six stories highlighting specific global, regional or country trends; and a table of the most relevant and popular indicators for that theme, together with a discussion of indicator compilation methodology. Questions that drive interest, applications that illustrate concepts, and the tools to test and solidify comprehension. Students come into their first Economics course thinking they will gain a better understanding of the economy around them. Unfortunately, they often leave with many unanswered questions. To ensure students actively

internalize economics, O'Sullivan/Sheffrin/Perez use chapter-opening questions to spark interest on important economic concepts, applications that vividly illustrate those concepts, and chapter-ending tools that test and solidify understanding.

Self-interest, economic efficiency and private property rights are among the most basic assumptions of market economics. But can an economic theory built on these assumptions alone provide adequate insight into human nature, motivation and ultimate goals to guide our economic life? John Stapleford says no along with those economists who recognize the limits of their

discipline. He insightfully shows us in detail how ethics are inextricably intertwined with economic life and analysis. Writing from a Christian ethical perspective, he interacts with seven standard introductory economics texts, exploring the moral challenges imbedded in various macro-, micro- and international economic theories and outlining a faithful response to them. Among the important ethical issues addressed are possibilities and perils of economic

growth the role of government in the economy the growth of work and loss of leisure lending and borrowing poverty and distributive justice environmental stewardship business and social responsibility legalized gambling the pornography industry debt relief for less developed countries the economics of immigration population control Keyed to seven of the most widely used introductory economics texts--Gwartney, Stroup & Sobel; Mankiw; Mansfield

& Behraves; McConnell & Brue; Miller; Samuelson & Nordhaus; and Stiglitz--this book will be especially useful for introductory courses in economics.

What 's Wrong with Economics?
Irwin/McGraw-Hill

A passionate and informed critique of mainstream economics from one of the leading economic thinkers of our time This insightful book looks at how mainstream economics ' quest for scientific certainty has led to a narrowing of vision and a

convergence on an orthodoxy that is unhealthy for the field, not to mention the societies which base policy decisions on the advice of flawed economic models. Noted economic thinker Robert Skidelsky explains the circumstances that have brought about this constriction and proposes an approach to economics which includes philosophy, history, sociology, and politics. Skidelsky's clearly written and compelling critique takes aim at the way that economics is

taught in today's universities, where a focus on modelling leaves students ill-equipped to grapple with what is important and true about human life. He argues for a return to the ideal set out by John Maynard Keynes that the economist must be a "mathematician, historian, statesman, [and] philosopher" in equal measure.
