The New York Times bestseller and definitive history of Christianity for our time—from the award-winning author of *The Reformation and Silence* A product of electrifying scholarship conveyed with commanding skill, Diarmaid MacCulloch's Christianity goes back to the origins of the Hebrew Bible and encompasses the globe. It captures the major turning points in Catholic, Protestant, and Orthodox history and fills in often neglected accounts of conversion and confrontation in Africa, Latin America, and Asia. MacCulloch introduces us to monks and crusaders, heretics and reformers, popes and abolitionists, and discover Christianity's essential role in shaping human history and the intimate lives of men and women. And he uncovers the roots of the faith that galvanized America, charting the surprising beliefs of the founding fathers, the rise of the Evangelical movement and of Pentecostalism, and the recent crises within the Catholic Church. Bursting with original insights and a great pleasure to read, this monumental religious history will not soon be surpassed.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is

grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Hardware Retailing

FIELD & STREAM, America ' s largest outdoor sports magazine, celebrates the outdoor experience with great stories, compelling photography, and sound advice while honoring the traditions hunters and fishermen have passed down for generations.

Peter Hunn. It's common for homeowners to have 2- or 4-cycle small engines in their lawn and garden equipment, utility vehicles, recreational vehicles, generators and other machines. With this easy-to-follow, richly illustrated handbook, homeowners will be able to understand small engines, troubleshooting them and working on them. The book has a brief history of significant and popular small engines and a guide to setting up a home workshop in which to work on them. It also includes case studies on the disassembly, maintenance, repair and/or rebuilding of: a 2-stroke lawnmower engine, a 4-stroke utility motor, a 2-stroke chainsaw engine, and a curbside junker. The writing is lively and entertaining and the color photos clearly show how to work on these useful engines.
