This book focuses on microeconomic foundations of capital structure theory. It combines theoretical results with a large number of examples, exercises and applications. The book examines fundamental ideas in capital structure management, some of which are still not very well understood in the business community, such as Modigliani and Miller ' s irrelevance result, trade-off theory, pecking-order theory, asset substitution, credit

rationing and debt overhang. Chapters also cover capital structure issues that have become very important following the recent financial crisis. Miglo discusses the ways in which financial economists were forced to look critically at capital structure, as the problems faced by many companies stemmed from their financing policies following the crisis. The book also discusses links between capital structure and firm ' s performance, corporate governance, firm ' s strategy and flexibility, and covers such

topics as life cycle approach to capital structure management, capital structure of small and start-up companies, corporate financing versus project financing and examples of optimal capital structure analyses for different companies. This comprehensive guide to capital structure theory will be of interest to all students, academics and practitioners seeking to understand this fast-developing and critical area of business management.
Modern World History

Science is a living, organic activity, the meaning and understanding of which have evolved incrementally over human history. This book, the first in a roughly chronological series, explores the development of the methodology and major ideas of science, in historical context, from ancient times to the decline of classical civilizations around 300 A.D. It includes details specific to the histories of specialized sciences including astronomy, medicine and physics—along with Roman engineering and Greek philosophy. It closely

describes the contributions of such individuals as Pythagoras, Hippocrates, Socrates, Plato, Aristotle, Alexander the Great, Euclid, Archimedes, Ptolemy, Seneca, Pliny the Elder, and Galen.

Modern World McDougal Littell/Houghton Mifflin

A compelling biography of a key figure of the French Revolution captures the paradoxical life of Maximilien Robespierre, from his beginnings as a provincial lawyer, to his rise to power as a revolutionary leader, to his eventual end on the guillotine

that had taken the lives of so many during the Terror that he had orchestrated. Reprint.
