Integrated Electronic Health Records* McGraw-Hill Education The New York Times Science Bestseller from Robert Wachter, Modern Healthcare's #1 Most Influential Physician-Executive in the US While modern medicine produces miracles, it also delivers care that is too often unsafe, unreliable, unsatisfying, and impossibly expensive. For the past few decades, technology has been touted as the cure for all of healthcare's ills. But medicine stubbornly resisted computerization - until now. Over the past five years, thanks largely to billions of dollars in federal incentives, healthcare has finally gone digital. Yet once

clinicians started using computers to actually deliver care, it dawned on them that something was deeply wrong. Why were doctors no longer making eye contact with their patients? How could one of America's leading hospitals give a teenager a 39-fold overdose of a common antibiotic, despite a state-of-the-art computerized prescribing system? How could a recruiting ad for physicians tout the absence of an electronic medical record as a major selling point? Logically enough, we've pinned the problems on clunky software, flawed implementations, absurd regulations, and bad karma. It was all of those things, but it was also something far more complicated. And far more interesting . . . Written with a rare combination of compelling stories and hard-hitting analysis by one of the nation's most thoughtful physicians, *The Digital Doctor* examines healthcare at the dawn of its computer age. It tackles the hard questions, from how technology is changing care at the bedside to whether government intervention has been useful or destructive. And it does so with clarity, insight, humor, and compassion. Ultimately, it is a hopeful story. "We need to recognize that computers in healthcare don't simply replace my doctor's scrawl with Helvetica 12," writes the author Dr. Robert Wachter. "Instead, they transform the work, the people who do it, and their relationships with each other and with patients. . . . Sure, we should have thought of this sooner. But it's not too late to get it right." This riveting book offers the prescription for getting it right, making it essential reading for everyone - patient and provider alike - who cares about our healthcare system.

The Digital Doctor: Hope, Hype, and Harm at the Dawn of Medicine's Computer Age McGraw-Hill Education

Technology is changing the qualifications required to perform both clinical and administrative allied health duties. Students entering the job market today must be familiar with the ways in which technology is used to perform on-the-job tasks. In particular, the understanding of electronic health records is essential. This text integrates the presentation of concepts with the opportunity to gain hands-on experience working with a simulated EHR software, Practice Partner. The subject matter is presented in a logical order, proceeding from introductory material to coverage of specific features and functions of EHRs. After describing the need for EHRs, the text explains the basic purpose and content of an EHR system. With that knowledge in place, the subject moves to the topic of the information technology used in EHR systems. The need to ensure the privacy

and security of the information in an EHR is emphasized. *LooseLeaf for Computers in the Medical Office* McGraw-Hill Education Hamilton, *Electronic Health Records, 3e* is the top choice for training students using live and up-to-date SpringCharts EHR software. *Electronic Health Records 3e* builds transferable medical documentation skills with a variety of exercises that walk students through different facets of using an EHR in the medical office. As students progress through SpringCharts, they learn to gather patient information, schedule appointments, record examination information, process lab tests, select codes, and more. Students who complete this course will learn the appropriate terminology and skills to use any EHR software program with minimal additional training. The practical, systematic approach is based on real-world medical office activities.
