College Accounting McGraw-Hill Education

Libby/Libby/Short wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Libby/Libby/Short is the only financial accounting text to successfully implement a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting.

An Introduction to Financial Accounting McGraw Hill

An adaptation of McGraw-Hill Australia's financial accounting text Australian Financial Accounting by Craig Deegan, authored by Anne Marie Ward of Ulster University. It communicates the detail necessary to understand, challenge and critically evaluate financial reporting.

Principles of Financial Accounting Irwin/McGraw-Hill

The Study Guide, written by the text authors, provides chapter summaries, detailed illustrations, and a wide variety of self-study questions, exercises, and multiple-choice problems (with solutions).

MP Principles of Financial Accounting (CH 1-17) and Circuit City AR Irwin/McGraw-Hill

Edmonds, Survey of Accounting is written for the non-accounting major and is designed to cover both Financial and Managerial Accounting in a 16-week course. It highlights the Edmonds Horizontal Financial Statements Model, and early coverage of the Statement of Cash Flows with coverage of cash through the financial chapters. The text does not cover debits and credits.

Study Guide to accompany Fundamentals of Financial Accounting, 2/e McGraw-Hill Higher Education

Learning Financial Accounting can often feel like learning a foreign language to students, in particular when terminology and procedure is piled on before core concepts are truly mastered. Introductory Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as "debits" and "credits". The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do -- rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage students by clearly and charismatically going over each learning objective in a conversational style. These videos help reinforce important lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path focused on critical thinking, clarity of

concept, and applicability of material to the real world.
