Blended (also called hybrid) classrooms, in which face-to-face interaction is intentionally combined with online activities to aid student learning, are becoming more and more common. Most recently, "flipped" classrooms have become a popular method for teaching because more time for active learning in-class can be gained by moving content delivery such as lecture to outside-of-class homework using technology tools such as video or lecture capture. The blended model is proving to be an environment that provides more self-directed, technology-mediated learning experiences for students who will be incorporating technology more and more into their professional lives post-college. The *Blended Course Design Workbook* meets the need for a user-friendly resource that provides faculty members and administrators with instructions, activities, tools, templates, and deadlines to guide them through the process of revising their traditional face-to-face course into a blended format. Providing a step-by-step course design process that emphasizes active learning and student engagement, this book will help instructors adapt traditional face-to-face courses to a blended environment by guiding them through the development of course goals and learning objectives, assignments, assessments, and student support mechanisms with technology integration in mind. It will also help instructors choose the right technologies based on an instructor's comfort level with technology and their specific pedagogical needs. The book will help each instructor who uses the text to develop a unique course by making choices about their course design based on student learning needs for their chosen topic and discipline. Every component of the workbook has been piloted with faculty designing and implementing blended courses and then revised to better meet the needs of faculty across a range of comfort levels with technology use. The *Blended Course Design Workbook* includes detailed instructions for each stage of course design alongside specific activities that the reader can complete. The book is unique because it facilitates a step-by-step process for blended course design with specific templates and tools that can be used across disciplines. Additional resources and handouts are posted on the book page as well as the author website, a href=http://www.bcdworkbook.comwww.bcdworkbook.com.

*Government Matters: American Democracy in Context* McGraw-Hill Education

This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content (including media as a learning supplement), in comparison to traditional face-to-face learning. Each chapter includes research on, and a broad-brush summary of, approaches to combining life sciences education with educational technologies. The chapters are organized into four main sections, each of which focuses on a key question regarding the consequences of incorporating media into education. In this regard, the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity. Further, they address the ongoing discussion as to whether students need to be present for lectures, and on how having agency in their own learning can improve both retention and conceptual understanding. To link the content to current events, the authors also shed light on the impact that the COVID-19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies. Consequently, the book offers life science educators valuable guidance on the technologies already available, and an outlook on what is yet to come.
