FRCR Physics MCQs in Clinical Radiology Bailliere Tindall Limited

There are very few radiology multiple choice question books on the market that reflect the current trends and developments in the field of imaging. Hence, the emphasis of this book is on cross-sectional CT and MR imaging. It highlights the current understanding and concepts in the state-of-the-art imaging of a wide range of diseases in the body. The multiple choice questions are organised according to body systems and imaging modalities. There are twelve sections in the book, testing the reader in a broad range of imaging knowledge. The questions are accompanied by expanded answers, which provide the reader with a summary of the key facts relating to a particular topic. This is especially useful in assisting the reader in consolidating his or her understanding of the subject. The questions are devised in a format similar to those encountered in the Part 2A examination of the Royal College of Radiologists (UK) and the Part 2 examinations of the Joint Australian and New Zealand College of Radiology. Candidates taking the American Radiology Board examinations will also find the book informative. [250 Best Answer MCQs for Clinical Medical Exam Preparation Book Remedica](#)

There are plenty of MCQ books around but most combine mainstream subjects such as gastroenterology and renal medicine, which most Senior House Officers find relatively straightforward. Few MCQ books, however, focus on the subjects that many candidates find difficult those in which they are least likely to have had good clinical experience. Infectious disease, haematology and clinical chemistry are three such subjects. Candidates feel uneasy about tackling MCQs in these areas, and these questions often become the deciders leading to success or failure. This new book from Galvani et al contains 150 five-part MCQs with full answers and explanations, for these three difficult areas.

This book, in MCQ format, is a comprehensive tool that will help Nuclear Medicine and Radiology residents and attending physicians to understand concepts in nuclear medicine. Questions cover clinical applications of nuclear medicine techniques to the cardiovascular, pulmonary, endocrine, skeletal, gastrointestinal, genitourinary, and central nervous systems. In addition, topics in physics, radiopharmacy, and radiation safety are addressed. The MCQ format closely resembles that used in board examinations in nuclear medicine. Each question has four possible answers, only one of which is correct. About 60% of the questions are linked to clinical cases, with each case having four questions on average, along with one or two images. The remainder of the questions are free-standing, with or without an image. Answers are concise but are supported by references to the literature when necessary. Pearls in boxes are used to highlight the most important pieces of information. While the questions are scrambled, as in board exams, an index categorizes each question into one of the systems or topics.

MCQs are a vital support to medical and science students, both to measure developing knowledge in a discipline and to build confidence for examinations. Many undergraduate and postgraduate exams use MCQs as the preferred method of testing. Written with the student in mind, this book supports the new medical curricula. It contains over 3000 novel and innovative questions which relate physiological knowledge to the clinical environment. The questions demand an integrative approach across related subjects and cover all the major aspects of physiology varying from quite basic material multisystem problems involving biochemistry, pathophysiology, pharmacology, and therapeutics. Using fully up-to-date, material, the questions vary in difficulty to suit medical students in their undergraduate years through to Membership Fellowship or Board level exams. Full answers are given to aid self-directed learning which is increasingly important in the changing curricula. Special areas of interest to trainee surgeons, physicians, anaesthetists, psychiatrists, and dentists are catered for without detracting from simple information common to all medical and paramedical disciplines. Those sitting for Board Exams in the USA and Canada will also find the text stimulating and informative. This is because much of the material is based on personal experience in a broad range of examinations and on information readily available in the major textbooks and journals used on both sides of the Atlantic. Linked to the new Oxford Core Texts series. The Oxford Core Texts: The Oxford Core Texts provide concise, yet comprehensive coverage of a range of essential topics in the medical curriculum. Written and tested in consultation with students, each book offers a clear and accessible account of the core material, supported by case studies and clinical examples. Efforts have been made throughout to include the key information which the reader will need to prepare for successful clinical practice - making these texts an ideal resource for all stages of the medical course beyond.

This text has been designed as a supplement to the Textbook of Surgery to assist readers in their preparation for examinations and to test their knowledge of the principles and practice of surgery. There are two types of Multiple Choice Questions: Type A and Type X. Type A have a single best response from five alternatives and are designed to test judgmental ability. Type X questions contain a stem with suggested answers that are either true or false and are designed to test factual knowledge and its application. The text is set out in three sections, the first containing Type A questions, the second containing Type X questions and the third containing short answer questions that emphasize clinical management problems. In each section, the questions are presented in the sequence used in Textbook of Surgery. The number of questions for each general topic relate to the relative importance ascribed to each topic in order to provide balance. The answers are accompanied by a reference to the

chapter(s) in the Textbook of Surgery where the information required to answer the specific question is presented.
