Unsaturated materials comprise residua, collapsible and expansive naturally occurring soils, compacted soils and, more recently, residues of solid wastes. The engineering problems associated with unsaturated materials range from those related to conventional geotechnical works (e.g. foundations, pavements, slopes and excavations, retaining structures, earthdams, irrigation canals, tunnelling, compacted embankments) to those included in the environmental area (e.g. natural slope instability, erosion and subsidence processes, tailings, residues or solid waste disposal, contaminant transport, remediation of contaminant sites, engineered barriers for environmental protection, re-use of residues). This book, published in three separate volumes, comprises a selection of selected and invited papers presented at the Third International Conference on Unsaturated Soils – UNSAT ' 2002 – that took place in Recife, Brazil, from 10th to 13th March 2002. The book is of interest to consultants, researchers, practitioners, lecturers and students with a background in geotechnical engineering, environmental engineering and engineering geology.

Winner of the 2010 Goethe Award for Psychoanalytic and Psychodynamic Scholarship! This book builds a key clinical bridge between attachment theory and psychoanalysis, deploying Holmes' unique capacity to weld empirical evidence, psychoanalytic theory and consulting room experience into a coherent and convincing whole. Starting from the theory – practice gap in psychoanalytic psychotherapy, the book demonstrates how attachment theory can help practitioners better understand what they intuitively do in the consulting room, how this benefits clients, and informs evidence-based practice. Divided into two sections, theory and practice, Exploring in Security discusses the concept of mentalising and considers three components of effective therapy – the therapeutic relationship, meaning making and change promotion – from both attachment and psychoanalytic perspectives. The second part of the book applies attachment theory to a number of clinical situations including: working with borderline clients suicide and deliberate self-harm sex and sexuality dreams ending therapy. Throughout the book theoretical discussion is vividly illustrated with clinical material, personal experience and examples from literature and film, making this an accessible yet authoritative text for psychotherapy practitioners at all levels, including psychoanalysts, psychiatrists, clinical psychologists, mental health nurses and counsellors.
