A solution that is unsaturated does not have excess material or solvent within the liquid. Unsaturated solutions have the potential to effectively dissolve more material before reaching the point of full saturation. A saturated solution is as saturated as it can possibly be under normal conditions.

IUPAC definition. According to the IUPAC definition, solubility is the analytical composition of a saturated solution expressed as a proportion of a designated solute in a designated solvent. Solubility may be stated in various units of concentration such as molarity, molality, mole fraction, mole ratio, mass (solute) per volume (solvent) and other units.
