Benchmarking the Competitiveness of the United States in Mechanical Engineering Basic Research

Government Printing Office World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are

affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed

liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals.

Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Career as a Mechanical Engineer

National Academies Press

Mechanical engineering is

critical to the design, manufacture, and operation of small and large mechanical systems throughout the U.S. economy. This book highlights the main findings of a benchmarking exercise to rate the standing of U.S. mechanical engineering basic research relative to other regions or countries. The book includes key factors that influence U.S. performance in mechanical engineering research, and near- and

longer-term projections of research leadership. U.S. leadership in mechanical engineering basic research overall will continue to be strong. Contributions of U.S. mechanical engineers to journal articles will increase, but so will the contributions from other growing economies such as China and India. At the same time, the supply of U.S. mechanical engineers is in jeopardy, because of declines in the number of U.S. citizens

obtaining advanced degrees and uncertain prospects for continuing to attract foreign students. U.S. funding of mechanical engineering basic research and infrastructure will remain level, with strong leadership in emerging areas.

Projections 2000 McGraw Hill Professional Provides an overview of the field, presents the educational background desired, and discusses opportunities for women and

minorities.

Opportunities in Mechanical Engineering
NTC/Contemporary Publishing Company

About the Book: Written by three distinguished authors with ample academic and teaching experience, this textbook, meant for diploma and degree students of Mechanical Engineering as well as those preparing for AMIE examination, incorporates the latest **Career Guide to Industries** New Age International Many things define a job seeker--experience, education, first impressions, connections, passion, and the

value you might bring to the company you wish to work for. For decades, the perceived ideal candidate would have all of the above, most of the above; however, a good candidate would have a four-year college degree. To a great extent, an employer still would like someone with a four-year college degree. However, I believe this is changing. The need for those who work with their hands and those who are willing to work their way up through the various levels of an organization is becoming more and more desired by companies. The time it will take you to earn your degree, you could be making a nice living

and will have accrued zero debt in the process. Plus, after working in an industry of your choice, something you do have an interest in, even a passion for, you may be on equal footing with a newly hired college grad based on the four years you have been working in your industry of choice, as you continue to work your way up through the company. You will find the more value you bring to a company, the more they will look to you to assume great responsibility. Typically, the more responsibility, the greater the paycheck. What makes this book timely is the fact as COVID-19 winds down, we are seeing many labor

shortages in many areas and industries. Now is the absolute best time to go to an industry experiencing a labor shortage, or enter one of the numerous industries researched in this book and get yourself the job you always wanted, without the cost and time involved with getting a four-year college education. I have nothing against getting a degree, and there are still many fields where they will always be mandatory; however, the trades, service industries, government, railroads, law enforcement, plus many others will welcome you with open arms without the need for a four-year degree. I hope this

book helps.
