"Huge sums have been spent on water and sanitation services in Tanzania, but much of that investment is standing idle in the country, producing little or no water for the intended beneficiaries. A major question is whether any of the investment can be salvaged to reduce the burden of water gathering on the population." - From 'Tanzania: Social Sector Review' Tanzania's social indicators remain among the poorest in the world. This report describes the trends in the social sectors and analyzes the factors that influence these trends. These trends include the performance of the economy, government social sector spending and policy, household behavior and incomes, and demographic trends. Findings from the surveys and case studies are synthesized to provide a comprehensive picture of the demand for and supply of education, health, water and sanitation, nutrition, and family planning services. The report discusses the situation and trends in the social sector and identifies ways that the government, the private sector, and households can use their respective resources most effectively.

This book looks at the growing segment of Internet of Things technology (IoT) known as Internet of Medical Things (IoMT), an automated system that aids in bridging the gap between isolated and rural communities and the critical healthcare services that are available in more populated and urban areas. Many technological aspects of IoMT are still being researched and developed, with the objective of minimizing the cost and improving the performance of the overall healthcare system. This book focuses on innovative IoMT methods and solutions being developed for use in the application of healthcare services, including post-surgery care, virtual home assistance, smart real-time patient monitoring, implantable sensors and cameras, and diagnosis and treatment planning. It also examines critical issues around the technology, such as security vulnerabilities, IoMT machine learning approaches, and medical data compression for lossless data transmission and archiving. Internet of Medical Things is a valuable reference for researchers, students, and postgraduates working in biomedical, electronics, and communications engineering, as well as practicing healthcare professionals.
