This book offers you a brief, but very involved look into the operations in the exploitation of Oil & Gas wells that will help you to be prepared for job interview at oil & gas companies. From start to finish, you'll see a general prognosis of the production process. If you are new to the oil & gas industry, you'll enjoy having a leg up with the knowledge of these processes. If you are a seasoned oil & gas person, you'll enjoy reading what you may or may not know in these pages. This course provides a non-technical overview of the phases, operations and terminology used on offshore production platforms. It is intended also for non-drilling personnel who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and

support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.

In this volume, methodological, cultural, technological, and political boundaries felt by writers are analyzed, translated, and challenged in a way that will appeal to researchers, theorists, graduate students, instructors, and managerial audiences. Instead of extracting rules from previous research, the contributors, working from multidisciplinary perspectives, describe and analyze the social and technological contexts surrounding

nonacademic writing. Their essays present a formative rather than summative outlook toward future research on nonacademic writing. Collectively, these chapters articulate a unique perspective toward nonacademic writing that considers: * The centrality of emerging communications technologies in nonacademic writing research and the need for a socio-technological perspective. New technologies reshape the concept of text and significantly impact the writing process and written products in nonacademic settings. * The relationship between the academy and the workplace. A number of chapters challenge us -- sometimes from opposing perspectives -- to scrutinize our role as writing educators in preparing students for the workplace. Should we support the interests of corporate employers, or should we resist those interests? Should we enculturate

students in workplace writing practices by placing them in these environments, or should we examine the tacit knowledge gained by workplace professionals and deliver this via classroom instruction? * New theory, new research agendas. Contributors from diverse fields offer new theoretical lenses or use established lenses in innovative ways, expanding the agenda for nonacademic writing research. This volume represents the vision the social landscape demands for research and pedagogy in nonacademic writing.
