[The Human Cost of Welfare: How the System Hurts the People It's Supposed to Help](#) Bloomsbury Publishing

Given the popularity of drones and the fact that they are easy and cheap to buy, it is generally expected that the ubiquity of drones will significantly increase within the next few years. This raises questions as to what is technologically feasible (now and in the future), what is acceptable from an ethical point of view and what is allowed from a legal point of view. Drone technology is to some extent already available and to some extent still in development. The aim and scope of this book is to map the opportunities and threats associated with the use of drones and to discuss the ethical and legal issues of the use of drones. This book provides an overview of current drone technologies and applications and of what to expect in the next few years. The question of how to regulate the use of drones in the future is addressed, by considering conditions and contents of future drone legislation and by analyzing issues surrounding privacy and safeguards that can be taken. As such, this book is valuable to scholars in several disciplines, such as law, ethics, sociology, politics and public administration, as well as to practitioners and others who may be confronted with the use of drones in their work, such as professionals working in the military, law enforcement, disaster management and infrastructure management. Individuals and businesses with a specific interest in drone use may also find in the nineteen contributions contained in this volume unexpected perspectives on this new field of research and innovation. Bart Custers is Associate Professor and Head of Research at eLaw, the Center for Law and Digital Technologies at Leiden University, The Netherlands. He has presented his work at international conferences in the United States, China, Japan, the Middle East and throughout Europe and has published over 80 scientific, professional and popularizing publications, including three books.

This book brings together chapters that describe, investigate, and analyze the place of English in education in multilingual Philippines. Unlike most studies on languages in education, which take a neutral, de-contextualized stance, this volume take a pluricentric view of the English language by positioning it in relation to its varieties, as well as to other languages in the country. Because of the changing realities of English in the Philippines, traditional assumptions about the language as monolithic and unchanging, as well as about how it should be taught and learned, need to be revisited and re-conceptualized.

"This publication is unique not only on a national but also international scale. It concerns the subject of the European Union's relations with Egypt after 2011 (including the earlier period), which is a highly topical issue and a very difficult one to analyse and explain. It is the outcome of a research grant titled 'The European Union towards the Transformation Processes in Egypt after 2011.' The authors largely belong to a small group of experts on North Africa and the Middle East, including Egypt. They are familiar with the literature on the subject from around the world and EU legislation. A significant strength of this project concerns the fieldwork carried out on site, in Egypt (literature, documents, interviews and observation), as well as direct contacts with European Union officials."

### Israel and Palestine--A Tale of Two Narratives Routledge

The European Union regime for fighting market manipulation and insider trading – commonly referred to as market abuse – was significantly reshuffled in the wake of the financial crisis of 2007/2008 and new legal instruments to fight market abuse were eventually adopted in 2014. In this monograph the authors identify the association between the financial crisis and market abuse, critically consider the legislative, policy and enforcement responses in the European Union, and contrast them with the approaches adopted by the United States of America and the United Kingdom respectively. The aftermath of the financial crisis, ongoing security concerns and increased legislation and policy responses to the fight against irregularities and market failures demonstrate that we need to understand, in context, the regulatory responses taken in this area. Specifically, the book investigates how the regulatory responses have changed over time since the start of the financial crisis. Market Manipulation and Insider Trading places the fight against market abuse in the broader framework of the fight against white collar crime and also considers some associated questions in order to better understand the contemporary market abuse regime.

European cities increasingly face problems caused by transport and traffic. For many people transport provision is unsatisfactory and current arrangements are leading to a deteriorating environment. A fundamental problem is that our currently fragmented approach makes it difficult to understand fully the circumstances and needs of transport users. In any overall approach public transport is a crucial component. Designing Mobility and Transport Services shows how these issues can be addressed and resolved. The development of an inclusive, validated passenger experience measurement instrument is the first step in understanding the situation and thus tackling it. It is needed if we are to create high quality, user centred, integrated, accessible public transport services, which are capable of attracting and retaining public transport users whilst meeting sustainability targets. The METPEX research project was devised to tackle these issues. Coordinated by Coventry University, the METPEX consortium brought together 16

European partners from 12 countries. The project 's underlying rationale was the proposition that if transport operators and authorities were provided with a robust, reliable and tailorable means of measuring the whole multimodal passenger journey, they could improve service provision. The book describes how such an improvement can be achieved, to attract travellers out of their private vehicles, thereby reducing congestion and pollution and increasing health and well-being. It provides a template for a creative approach and a meta-design narrative in designing for transport systems to enhance mobility choices by improving the door to door journey and thus underpin sustainable transport initiatives.

Author Pdraig O'Malley is the subject of the new acclaimed documentary The Peacemaker. " Impressive . . . [O ' Malley] has done a tremendous amount of research about the Israeli-Palestinian conflict. " —The New York Times Book Review Disputes over settlements, the right of return, the rise of Hamas, recognition of Israel as a Jewish state, and other intractable issues have repeatedly derailed peace negotiations between Israel and Palestine. Now, in a book that is sure to spark controversy, renowned peacemaker Pdraig O ' Malley argues that the moment for a two-state solution has passed. After examining each issue and speaking with Palestinians and Israelis as well as negotiators directly involved in past summits, O ' Malley concludes that even if such an agreement could be reached, it would be nearly impossible to implement given a variety of obstacles including the staggering costs involved, Palestine ' s political disunity and economic fragility, rapidly changing demographics in the region, Israel ' s continuing political shift to the right, global warming ' s effect on the water supply, and more. In this revelatory, hard-hitting book, O ' Malley approaches the key issues pragmatically, without ideological bias, to show that we must find new frameworks for reconciliation if there is to be lasting peace between Palestine and Israel.

Exploring obstacles to effective compensation of victims of competition infringements, this book categorises the types of victims harmed and the types of losses arisen from these infringements to identify to what extent there is a need for enhanced private competition law enforcement in the European Union (EU) and the best way to address this need. It shows that there is a genuine need for facilitating consumer damages actions and that consumer claims are the only claims that can be pursued in a collective redress action. In order to compensate consumers and overcome barriers to effective enforcement of their right to damages, it structures a collective redress action for consumers by considering the following elements: i. the formation of the group, ii. the type of representative party iii. funding mechanisms and iv. calculation and distribution of damages.

The 2016 presidential election has shown that the Republican Party is at a crossroads. While a Trump candidacy took even the most seasoned political analysts by surprise, the rise of racially charged anti-elitism within the Grand Old Party has been an ongoing project for the last half a century, initiated and deliberately driven by its leaders and strategists who identified the former Confederacy as the foundation for conservative majorities. This book charts the path of the party ' s ever increasing Southernization and simultaneous Evangelicalization while providing a detailed assessment of the GOP ' s future chances of fashioning majorities in a country that is undergoing momentous demographic changes.

This book examines the normative tensions inherent in upward mobility within the international system, focusing particularly on the clash between sovereign self-interest and the putatively universal norms associated with international interventions. It provides extensive detail and deep analysis of Brazil ' s nature as a rising power, and that nature ' s implications for how the country crafts its international profile on issues such as intervention. In addition, the book proposes innovative ways of (re)organising thematic, conceptual and empirical research on the normative behaviour of emergent powers with regard to institutions of global governance and questions of intervention. In analysing what distinguishes Brazil as a rising power, the contributors begin from the assumption that participation in intervention is an increasingly crucial element in demonstrating the capacity and responsibility for which demand accrues as a state seeks increased international profile. As such, the debates around intervention serve as an indicative locus for examining the clash of norms that accompanies emergence as a global player. The book ' s approach is to organise the analysis around thematic rather than chronological or praxis-based lines, using the Brazilian case as an illustrative example capable of extrapolation to other emerging powers such as Turkey, India and others. This work draws together rich empirical detail with sophisticated and varied conceptual analysis and will be of interest to scholars of international relations, Latin-American politics and global governance.

The question of whether new rules or regulations are required to govern, restrict, or even prohibit the use of autonomous weapon systems has been the subject of

debate for the better part of a decade. Despite the claims of advocacy groups, the way ahead remains unclear since the international community has yet to agree on a specific definition of Lethal Autonomous Weapon Systems and the great powers have largely refused to support an effective ban. In this vacuum, the public has been presented with a heavily one-sided view of Killer Robots. This volume presents a more nuanced approach to autonomous weapon systems that recognizes the need to progress beyond a discourse framed by the Terminator and HAL 9000. Re-shaping the discussion around this emerging military innovation requires a new line of thought and a willingness to challenge the orthodoxy. Lethal Autonomous Weapons focuses on exploring the moral and legal issues associated with the design, development and deployment of lethal autonomous weapons. In this volume, we bring together some of the most prominent academics and academic-practitioners in the lethal autonomous weapons space and seek to return some balance to the debate. As part of this effort, we recognize that society needs to invest in hard conversations that tackle the ethics, morality, and law of these new digital technologies and understand the human role in their creation and operation.

The challenge of teaching international studies is to help students think coherently about the multiple causes and effects of global problems. In *International Studies: Global Forces, Interactions, and Tensions*, award-winning scholars Scott Straus and Barry Driscoll give students a clear framework that pinpoints how key factors—forces, interactions, and tensions—contribute to world events, with both global and local consequences. The authors first show students how to look for common patterns in global issues by introducing four world-shaping forces: global markets, shifting centers of power, information and communications technologies, and global governance. They systematically trace how these forces prompt interactions among world actors and thus give rise to a set of tensions that spur key challenges. The framework enables students to ask and answer for themselves—Who is interacting? Where did such interactions develop? What policies or institutions govern them? Why are they getting certain global and local reactions? Students then apply the framework to the global problems that matter most to them: human rights abuses, economic inequality, terrorism, forced migration, pandemics and global health responses, climate change, food security, and more. *International Studies* raises the bar for the Introduction to IS course, moving beyond interdisciplinary, and into the realm of critical analysis to increase student relevancy and motivation. #### The American experience Routledge

Insurance related to outer space activities has been around since the 1960s, but has become vastly more significant with the increased commercial use of satellites. This book focuses on the legal aspects of space insurance in the contractual context, analysing space risk as well as the insurance terms used on the market. It offers the first in-depth coverage, both practical and theoretical, of space insurance from an international law perspective. Attending throughout to the important and problematic distinction between the space segment (upstream) and ground segment (downstream) in space law, this book deals comprehensively with such issues and topics as the following: - the main hazards relating to space activities; - the impact of new space technologies on the level of risk and insurance; - the differing types of risks attributable to various entities in the context of insurable interest; - aspects of the space risk allocation regimes and risk assessment; - the impact of the five 'space treaties' — the Outer Space Treaty, the Liability Convention, the Rescue Agreement, the Registration Convention and the Moon Agreement — on the subject and scope of insurance coverage; - the advent of suborbital flight, commercial human space flight and space tourism in the context of emerging insurance risks; - the problem of space debris; - contractual aspects of space activities affecting the space insurance risks; - basic notions such as 'outer space', 'space object' in the context of space activities and related insurance coverage; - basic insurance principles and their operation in the space insurance; and - the adjustment of losses and the settlement of disputes in space insurance. The author emphasises the need to understand the various insurance risks facing particular types of commercial space activities, including pre-launch, launch, transportation, spaceflight, satellite communications, satellite navigation, satellite remote sensing and space station operation. Satellites are increasingly a vital part of many daily activities of contemporary society and the Earth's orbit is becoming ever more crowded, heightening the risks of collision, damage and claims. This thoroughly researched book will therefore be extremely useful to lawyers, policymakers and academics tasked with defining the scope of insurance coverage that accurately mirrors technological, contractual and legal reality. Its practical aspect will be of extraordinary value to insurance lawyers, underwriters and brokers.

#### Global and Local Challenges and Responses Simon and Schuster

"A trenchant summation" and analysis of the legal rationales behind the US drone policy of targeted killing of suspected terrorists, including US citizens (Publishers Weekly, starred review). In the long response to 9/11, the US government initiated a deeply controversial policy of "targeted killing"—the extrajudicial execution of suspected terrorists and militants, typically via drones. A remarkable effort was made to legitimize this practice; one that most human rights experts agree is illegal and that the United States has historically condemned. In *The Drone Memos*, civil rights lawyer Jameel Jaffer presents and assesses the legal memos and policy documents that enabled the Obama administration to put this program into action. In a lucid and provocative introduction, Jaffer, who led the ACLU legal team that secured the release of many of the documents, evaluates the drone memos in light of domestic and international law. He connects the documents' legal abstractions to the real-world violence they allow, and makes the case that we are trading core principles of democracy and human rights for the illusion of security. "A careful study of a secretive counterterrorism infrastructure capable of sustaining endless, orderless war, this book is profoundly necessary." —Katrina vanden Heuvel, editor and publisher of *The Nation*

#### The Drone Debate Springer

Throughout their long history, the primary concern of central banks has oscillated between price stability in normal times and financial stability in extraordinary times. In the wake of the recent global financial crisis, central banks have been given additional responsibilities to ensure financial stability, which has sparked intense debate over the nature of their role. Bankers and policy makers face an enormous challenge finding the right balance of power between the central bank and the state. This volume is the result of an international conference held at Norges Bank (the central bank of Norway). International experts and policy makers present research and historical analysis on the evolution of the central bank. They specifically focus on four key aspects: its role as an institution, the part it plays within the international monetary system, how to delineate and limit its functions, and how to apply the lessons of the past two centuries.
