In December 1994, having received assurances within the Budapest Memorandum agreement that its sovereignty would be respected and secured by Russia, the United States, and the United Kingdom, Ukraine gave up the third-largest nuclear arsenal in the world and joined the Treaty on the Non-Proliferation of Nuclear Weapons, endowing the nonproliferation regime with substantial momentum. Based on original and heretofore unavailable documents, Yuri Kostenko's account of the negotiations between Ukraine, Russia, and the United States reveals for the first time the internal debates of the

Ukrainian government, as well as the pressure exerted upon it by its international partners. Kostenko presents the Ukrainian view on the issue of nuclear disarmament and raises the question of whether the complete and immediate dismantlement of the country's enormous nuclear arsenal was strategically the right decision for ensuring its sovereignty and territorial integrity, especially in view of the 2014 annexation of Crimea by Russia, one of the signatories of the Budapest Memorandum.

This paper discusses Jamaica's Thirteenth Review Under the Arrangement Under the Extended Fund Facility. Program implementation is on track. The authorities' continued commitment to the demanding reform program even in the fourth year of the IMF-supported program is commendable. All quantitative performance criteria to be completed by the end of June 2016, as well as the continuous quantitative program targets and structural benchmarks, have been met. Domestic confidence indicators are at an all-time high, and there are signs of improving economic activity, including agricultural recovery, strong performance in tourism and manufacturing, and stronger private sector credit growth. Higher growth dividends, more job creation, and improved living standards will be essential to continued social support for the reform agenda.

What is the future of the oil and gas sector in Lebanon? Following the recent discovery of these valuable resources in the southern Mediterranean, including in the Cypriot and Israeli offshore reserves, the possibility of Lebanon also becoming a petroleum-producing country has been raised. This collection of essays addresses the major challenges and opportunities that accompany the country's hope to join the petroleum club. Covering the key policy issues - from Lebanon's susceptibility to the oil curse, to the environmental risks of production - this book brings together expert analysis to offer answers at the institutional level. Of central importance, the contributors argue, is that for Lebanon to benefit from the discovery of petroleum, it must first reform its institutions with the full support of the voting public and civil society. Combining rigorous quantitative and qualitative research, the Lebanese Center for Policy Studies has produced here an essential book that puts petroleum in Lebanon, and the important questions that come with it, within a global perspective. Health Information Systems and the Advancement of Medical Practice in Developing Countries

Taylor & Francis

This book is a historical review of international food and agriculture since the founding of the international organizations following the Second World War, including the World Bank and the Food and Agriculture Organization of the United Nations (FAO), the World Food Programme (WFP) and into the 1970s, when CGIAR was established and the International Fund for Agricultural Development (IFAD) was created to recycle petrodollars. Despite numerous international consultations and an increased number of actors, there has been no real growth in international assistance, except for the work of the Bill and Melinda Gates Foundation. The book concurrently focuses on the structural transformation of developing countries in Asia and Africa, with some making great strides in small farmer development and in achieving structural transformation of their economies. Some have also achieved Sustainable Development Goals (SDGs), particularly SDG2, but most have not. Not only are some countries, particularly in South Asia and sub-Saharan Africa, lagging behind, but they face new challenges of climate change, competition from emerging countries, population pressure, urbanization, environmental decay, and dietary transition. Lagging developing countries need huge

investments in human capital, and physical and institutional infrastructure, to take advantage of rapid change in technologies, but the role of international assistance in financial transfers has diminished. The COVID-19 pandemic has not only set many poorer countries back but starkly revealed the weaknesses of past strategies. Transformative changes are needed in developing countries with international cooperation to achieve better outcomes. Will change in the United States bring new opportunities for multilateral cooperation?"--

This monograph explores the connections between the European Union and international dispute settlement. It highlights the legal challenges faced by the principal players in the field: namely the EU as a political actor and the Court of

Justice of the EU as an international and domestic judiciary. In addition, it places the subject in its broader context of international dispute settlement, and the participation of the EU and its Member States in international disputes. It focuses on horizontal and cross-cutting themes, bringing together insights from the different sectors of trade, investment and human rights, and offering a variety of perspectives from academics, policymakers and practitioners.

Arms and Influence explores the complex relationship between technology, policymaking, and international norms. Modern technological innovations such as the atomic bomb, armed unmanned aerial vehicles (UAVs), and advanced reconnaissance satellites have fostered debates about the boundaries of international norms and legitimate standards of behavior. These advances allow governments new opportunities for action around the world and have, in turn, prompted a broader effort to redefine international standards in areas such as self-defense, sovereignty, and preemptive strikes. In this book, Jeffrey S. Lantis develops a new theory of norm change and identifies its stages, including redefinition (involving domestic political deliberations) and constructive norm substitution (in multilateral institutions). He deftly takes some of the most controversial new developments in military

technologies and embeds them in international relations theory. The case evidence he presents suggests that periods of change are underway across numerous different issue areas.

Our intuition on how the world works could well be wrong. We are surprised when new competitors burst on the scene, or businesses protected by large and deep moats find their defenses easily breached, or vast new markets are conjured from nothing. Trend lines resemble saw-tooth mountain ridges. The world not only feels different. The data tell us it is different. Based on years of research by the directors of the McKinsey Global Institute, *No Ordinary Disruption: The Four Forces Breaking all the Trends* is a timely and important analysis of how we need to reset our intuition as a result of four forces colliding and transforming the global economy: the rise of emerging markets, the accelerating impact of technology on the natural forces of market competition, an aging world population, and accelerating flows of trade, capital and people. Our intuitions formed during a uniquely benign period for the world economy—often termed the Great Moderation. Asset prices were rising, cost of capital was falling, labour and resources were abundant, and generation after generation was growing up more prosperous than their parents. But the Great Moderation has gone. The cost of capital may rise. The price of everything from grain to steel may become more

volatile. The world's labor force could shrink. Individuals, particularly those with low job skills, are at risk of growing up poorer than their parents. What sets *No Ordinary Disruption* apart is depth of analysis combined with lively writing informed by surprising, memorable insights that enable us to quickly grasp the disruptive forces at work. For evidence of the shift to emerging markets, consider the startling fact that, by 2025, a single regional city in China—Tianjin—will have a GDP equal to that of the Sweden, of that, in the decades ahead, half of the world's economic growth will come from 440 cities including Kumasi in Ghana or Santa Carina in Brazil that most executives today would be hard-pressed to locate on a map. What we are now seeing is no ordinary disruption but the new facts of business life—facts that require executives and leaders at all levels to reset their operating assumptions and management intuition.

This book examines the internal and external implications of Israel's natural gas discoveries in the Eastern Mediterranean. The nation's changed status from being an importer of coal and oil to that of an exporter of natural gas has consequences not only for the energy sector but also for the fragile geopolitics of the region. The book: Explores the challenges and issues of energy economics and governance; Analyses Israel's

gas diplomacy with its neighbours in the Middle East and North Africa and its potential positive impact on the amelioration of the Arab-Israeli conflict; Studies how Israel can avoid the deleterious impact of the Dutch disease once the government's share of the export revenues start flowing. The author traces a consummate picture of history, politics, and conflicts that shape the economics of energy in Israel and its future trajectories. A major intervention in Middle East studies, this volume will be of great interest to scholars and researchers of energy studies, development studies, strategic studies, politics, diplomacy, and international relations. It will also be of interest to government agencies, think-tanks, and risk management firms.

The economic influence of central banks has received ever more attention given their centrality during the financial crises that led to the Great Recession, strains in the European Union, and the challenges to the Euro. The *Oxford Handbook of the Economics of Central Banking* reflects the state of the art in the theory and practice and covers a wide range of topics that will provide insight to students,

scholars, and practitioners. As an up to date reference of the current and potential challenges faced by central banks in the conduct of monetary policy and in the search for the maintenance of financial system stability, this Oxford Handbook covers a wide range of essential issues. The first section provides insights into central bank governance, the differing degrees of central bank independence, and the internal dynamics of their decision making. The next section focuses on questions of whether central banks can ameliorate fiscal burdens, various strategies to affect monetary policy, and how the global financial crisis affected the relationship between the traditional focus on inflation targeting and unconventional policy instruments such as quantitative easing (QE), foreign exchange market interventions, negative interest rates, and forward guidance. The next two sections turn to central bank communications and management of expectations and then mechanisms of policy transmission. The fifth part explores the challenges of recent developments in the economy and debates about the roles central banks should play, focusing on micro- and macro-prudential arguments. The implications of recent developments for policy modeling are covered in the last section. The breadth and depth enhances understanding of the challenges and opportunities facing central

banks.

This research monograph is the first authoritative work on the office of the Welsh Language Commissioner and the associated Welsh language regulatory and statutory regime. In setting the Commissioner in context - in Wales, the UK and internationally - the work draws upon a rich variety of source material arising from fieldwork conducted in a number of jurisdictions. The research data includes, for example, an extensive series of documents

obtained under a number of Freedom of Information applications, in-depth interviews with key actors from pertinent legislatures, governments, regulatory offices, interest groups and civic society. The linguistic coverage of source material includes English and Welsh, as well as, where relevant, Irish, German, Catalan, Spanish, French and Basque, in a publication which is multi-disciplinary in approach, engaging with the scholarly and professional literature in language policy and planning, socio-legal studies and the politics of language.

The Future of Petroleum in Lebanon Taylor & Francis
Unaccompanied child asylum seekers are amongst the world's most vulnerable populations, and their numbers are increasing. The intersection of their age, their seeking asylum, and separation from their parents creates a specific and acute triple burden of vulnerability. Their precariousness has long been recognised in international human rights law. Yet, human rights-based responses have been subordinated to progressive global securitisation of irregular migration through interception, interdiction, extraterritorial processing and immigration detention. Such an approach necessitates an urgent paradigm shift in how we comprehend their needs as children, the impact of punitive border control laws on them, and the responsibility of States to these children when they arrive at their borders seeking asylum. This

book reconceptualises the relationship between unaccompanied child asylum seekers and States. It proposes a new conceptual framework by applying international human rights law, childhood studies and vulnerability theory scholarship in analysing State obligations to respond to these children. This framework incorporates a robust analysis of the operation and impact of laws on vulnerable populations, a taxonomy for articulating the gravity of any consequent harms and a method to prioritise recommendations for reform. The book then illustrates the framework's utility using Australia's treatment of unaccompanied children as a case study. This book illuminates key learnings from human rights law, childhood studies and vulnerability theory and transforms them into a new roadmap for law reform. As such, it will be a valuable practice-based resource for practitioners, non-government organisations, advocates, policymakers and the general public interested in advocating for the rights of vulnerable populations as well as for academics, researchers and students of human rights law, refugee law, childhood studies and vulnerability studies.

During the last 15 years Putin's policies have produced a number of controversial effects both at the international and domestic levels, some diplomatic results, and unresolved regional conflicts. In foreign policy he accordingly launched the idea of a Greater Europe. To this aim and with the view to highlighting the goodwill of the Russian government to enhance cooperation with the European Union as a pro-active and equal partner. Sooner than expected, political divergences and vital interests emerged. As a result, the Greater Europe project was progressively frozen, if not plainly abandoned. However, the EU-Russia joint attempts to solve the Ukrainian crises, which were undertaken during the "Normandy Four" meetings (Germany, France, Russia, Ukraine), resulted in signing the weak - but still important - Minsk agreements. This helps to prove that there is still room for cooperation between the two sides. These agreements may hopefully set the stage for a more comprehensive deal aiming to close the gap between the EU's and Russia's competing visions.

The Association of Chartered Certified Accountants (ACCA) is the global body for professional accountants. With over 100 years of providing world-class accounting and finance qualifications, the ACCA has significantly raised its international profile in recent years and now supports a BSc (Hons) in Applied Accounting and an MBA.BPP Learning Media is an ACCA Official Publisher. P2 is a very challenging paper which builds on the knowledge and skills acquired at earlier levels in the preparation and analysis of financial reports for single entities and groups. It takes these areas to a higher level, putting into context the role of the accountant as a professional steward and adviser, who is responsible to the stakeholders of an organisation. It has five main sections: 1. Regulatory and ethical framework and current issues 2. Reporting the financial performance of entities 3. Group financial statements 4. Specialised entities 5. Analysis of the financial performance of entities The main new topics introduced at this level relate to group accounts, but other topics are tested with a different emphasis and in more depth than at the Fundamentals Level. We provide material for both International and UK streams. The study text has been reviewed by the examiner and takes account of his advice on approaching the paper. Ethics, which have an impact on all aspects of financial reporting, are introduced at an early stage in the text, as is corporate social responsibility, so that students do not neglect these topics when covering the numerical areas.

Accounting standards come next, combining revision with extension into more advanced areas. After a brief revision of basic groups, the more advanced consolidation topics are covered. Current issues are covered throughout the text within the appropriate topics, and also summarised towards the end of the book.
