The groundbreaking investigative story of how three successive presidents and their military commanders deceived the public year after year about America's longest war, foreshadowing the Taliban's recapture of Afghanistan, by Washington Post reporter and three-time Pulitzer Prize finalist Craig Whitlock. Unlike the wars

in Vietnam and Iraq, the US invasion of Afghanistan in 2001 had near-unanimous public support. At first, the goals were straightforward and clear: to defeat al-Qaeda and prevent a repeat of 9/11. Yet soon after the United States and its allies removed the Taliban from power, the mission veered off course and US officials lost sight of their original objectives. Distracted by the war in Iraq, the US military became mired in an unwinnable guerrilla conflict in a country it did not understand. But no president wanted to admit failure, especially in a war that began as a just cause. Instead, the Bush, Obama, and Trump administrations sent more and more troops to

Afghanistan and repeatedly said they were making progress, even though they knew there was no realistic prospect for an outright victory. Just as the Pentagon Papers changed the public's understanding of Vietnam, The Afghanistan Papers contains startling revelation after revelation from people who played a direct role in the war, from leaders in the White House and the Pentagon to soldiers and aid workers on the front lines. In unvarnished language, they admit that the US government's strategies were a mess, that the nation-building project was a colossal failure, and that drugs and corruption gained a stranglehold over their allies in the Afghan

government. All told, the account is based on interviews with more than 1,000 people who knew that the US government was presenting a distorted, and sometimes entirely fabricated, version of the facts on the ground. Documents unearthed by The Washington Post reveal that President Bush didn't know the name of his Afghanistan war commander—and didn't want to make time to meet with him. Secretary of Defense Donald Rumsfeld admitted he had “no visibility into who the bad guys are.” His successor, Robert Gates, said: “We didn't know jack shit about al-Qaeda.” The Afghanistan Papers is a shocking account that will supercharge a long overdue reckoning over what went wrong and forever change the way the conflict is remembered.

American Bar Association  
This volume explores the opportunities and challenges facing the accounting profession in an increasingly globalized business and financial reporting environment. It looks back at past experiences of the

profession in attempting to meet its public interest obligation. It examines the role and responsibilities of accounting to society including regulatory requirements, increased emphasis on corporate social responsibility, accounting fraud and whistle-blowing implications, internationalization of public interest obligations, and providing the education needed to be successful. The book incorporates an ethical dimension in making these assessments. Its focus is a conceptual, theoretical one drawing on classical philosophy, the sociology of professions, economic theory, and the public interest dimension of accountants as professionals. The authors of papers are long-time contributors to the annual symposium on Research in Accounting Ethics sponsored by the Public Interest Section of the AAA.

This book builds on existing work exploring succession, disturbance ecology, and the interface between geophysical and biological systems in the aftermath of the 1980 eruptions of Mount St. Helens. The eruption was dramatic both in the spatial extent of impacts and the range of volcanic disturbance types and intensities. Complex geophysical forces created unparalleled opportunities to study initial ecological responses and long-term succession

processes that occur in response to a major contemporary eruption across a great diversity of ecosystems—lowland to alpine forests, meadows, lakes, streams, and rivers. These factors make Mount St. Helens an extremely rich environment for learning about the ecology of volcanic areas and, more generally, about ecosystem response to major disturbance of many types, including land management. Lessons about ecological recovery at Mount St. Helens are shaping thought about succession, disturbance ecology, ecosystem management, and landscape ecology. In the first five years after the eruption several syntheses documented the numerous, intensive studies of ecological recovery. The 2005 volume “Ecological Responses to the 1980 Eruption of Mount St. Helens” (Springer Publishing) was the first ecological synthesis since 1987 of the scores of ecological studies underway in the area. More than half of the world's published studies on plant and animal responses to volcanic eruptions have taken place at Mount St. Helens. The 25-year synthesis, which generally included investigations (i.e., data) from 1980-2000, made it possible to more thoroughly analyze initial stages of ecological responses and to test the validity of early interpretations and the duration of early phenomena. And 35 years after the eruption, it is time for many of the scientists working in the first three-decade, post-eruption period to pass the science baton to the next generation of scientists to work at Mount St. Helens, and a synthesis of this

time of transfer of responsibility to a younger cohort of scientists will be an enormous asset to the continuation of work at the volcano.

The book contains a collection of papers dealing with a range of controversial accounting issues which exercised the minds of local authority officials during the period 1909-1934 and the "solutions" embodied in the Accounts (Boroughs and Metropolitan Boroughs) Regulations 1930. The contributors to the debate were mainly local government officials and the items reproduced cover a wide range of matters such as the content of the abstract accounts; the need for standardization and an illuminating comparison of the nature and contents of municipal accounts with those of limited companies. A number of issues which received close attention from the literature during the early part of the present century were related to the growth of municipal trading undertakings (water, gas, tramways and electricity). The pricing of these services was a matter of considerable debate; questions included whether these services should be priced to generate a profit, break-even or receive a subsidy from the rates. The depreciation question and the related issues of loan periods and the need for a sinking fund receive some attention as do the growing concern of municipal debt. Economic and Management Sciences, Grade 8 Oswaal Books and Learning Private Limited This book examines cooperation between the US and the EU on financial regulatory reform, notably at the outset and the first three years of the global financial crisis. It discusses the development of US-EU cooperation on financial regulation over the last few decades at several levels, including at heads of state level, markets regulator

level and at international level, and progresses with a detailed examination of cooperation at the outset of the financial crisis. It looks at the nature of and motivation for intense US-EU cooperation on coordinating a response to the crisis and presents a compelling argument that a defacto alliance was formed, which served to benefit respective US and EU interests domestically and in the international financial system. Providing a new perspective on financial regulatory reform after the last financial crisis and the relationship of regulatory outcomes to international financial governance, this volume will be of use to researchers interested in transatlantic relations, financial regulation, international relations, global governance, and the European Union, as well as professionals and policymakers working in foreign relations, financial markets, or banking policy. Oswaal NCERT & CBSE Question Bank Class 7 Science Book (For 2022 Exam) Springer The book examines the role of credit rating agencies (CRAs) in the subprime mortgage crisis. The CRAs are blamed for awarding risky securities ' 3-A ' investment grade status and then failing to downgrade them quickly enough when circumstances changed, which led to investors suffering substantial losses. The causes identified by the regulators for the gatekeeper failure were conflicts of interest (as the issuers of these securities pay for the ratings); lack of competition (as the Big Three CRAs have dominated the market share); and lack of regulation for CRAs. The book

examines how the regulators, both in the US and EU, have sought to address these problems by introducing soft law self-regulation in accordance with the International Organisation of Securities Commissions Code and hard law statutory regulation, such as that found in the " Reform Act " and " Dodd-Frank Act " in the US and similar provisions in the EU. The highly topical book examines these provisions in detail by using a doctrinal black-letter law method to assess the success of the regulators in redressing the problems identified. It also examines the US case law regulation relating to the legal liability of CRAs. The book examines whether the regulations introduced have had a deterrent effect on the actions of CRAs, whether investors are compensated for their losses, and how the regulators have dealt with the issues of conflicts of interest and an anti-competitive environment. Should liability be introduced for CRAs through changes in the law so as to compel them to issue reliable ratings and solve the current problems? The book seeks to simplify the complex issues involved and is backed by concrete evidence; as such, it will appeal to both the well-informed and the lay general public who are interested in learning more about the role of CRAs in the sub-prime mortgage crisis and regulators ' attempts to remedy the situation. Novice readers can familiarise themselves with the legal and financial terminology used by referring to the glossary at the end of the book.
