flash fires a pre-flash, which takes a measurement of the light reading, and then fires the flash at the power level that it thinks will properly expose the image. The biggest pro is that it's automated and does the thinking for you, but it comes with a whole list of cons which is why we prefer manually

controlling our flash.

User's Guide (Rev. J)**

Manual mode is also really helpful when you 'slave' more than one flash. Slaving is when you sync more than one flash so that they go off at the same time. In manual mode, each flash can be set to a different power output so you can choose which is your key light and which is your fill - giving your photos more depth and contrast.

Using the Flash The COOLPIX 900 offers a choice of five flash modes: "Auto," "Auto with Red-Eye Reduction," "Slow Synchronized," "Any-time Flash," and "Flash Cancel." An icon showing the current mode is displayed in the control panel. Page 33 Using the flash close to your subject's eyes could produce temporary visual impairment. Note: The COOLPIX 900's built-in flash has a range of

two meters at maximum zoom, three meters at minimum zoom (maximum angle).
