[Clymer MerCruiser Stern Drive Shop Manual, 1998-2001](#) McGraw Hill Professional An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Popular Science Butterworth-Heinemann

This is a book about excellence, more particularly about the conditions under which excellence is possible in our kind of society; but it is also—inevitably—a book about equality, about the kinds of equality that can and must be honored, and the kinds that cannot be forced. Such a book must raise some questions which Americans have shown little inclination to discuss rationally. What are the characteristic difficulties a democracy encounters in pursuing excellence? Is there a way out of these difficulties? How equal do we want to be? How equal can we be? What do we mean when we say, “ Let the best man win ” ? Can an equalitarian society tolerate winners? Are we overproducing highly educated people? How much talent can the society absorb? Does society owe a living to talent? Does talent invariably have a chance to exhibit itself in our society? Does every young American have a “ right ” to a college education? Are we headed toward domination by an intellectual elite? Is it possible for a people to achieve excellence if they don ’ t believe in anything? Have the American people lost their sense of purpose and the drive which would make it possible for them to achieve excellence?
