If the engine temperature is too hot, the thermostat opens to allow more water into the engine. If the engine is too cold, the thermostat

---

closes so that the water cannot enter the engine to cool it. Replacing the thermostat in your Mercruiser Alpha is definitely a DIY project, and you can find a new one at your local boat shop.

After turning the key, the needle will jump to 100 and stays there even I run the boat and engine's temp is around 150 (checked with thermometer gun). I've located the buzzer sensor (on thermostat housing) but I can't find the temperature sensor location! Any help will be appreciated!!! Oh, the engine is Mercruiser 5L (8 cyl) year 1995
