Seloc Yamaha Outboards

There are hundreds of large surface water bodies used to store drinking water supplies located throughout the United States and Canada. Some of these water bodies are already prime recreational attractions with strong economic and quality-of-life impacts upon their communities. Operational and boating management options can significantly reduce the levels of MTBE and other fuel-related contaminants. This report comprehensively evaluates these options to give practical data and advice to water managers who wish to consider the benefits of dual use without introducing

unacceptable health risks into the water bodies being managed. RESEARCH PARTNERS * California Department of Health Services * Contra Costa Water District Originally published by AwwaRF for its subscribers in 2003
