"Later than usual one summer morning in 1984 . . ." On California's fog-hung North Coast, the enchanted redwood groves of Vineland County harbor a wild assortment of sixties survivors and refugees from the "Nixonian Reaction," still struggling with the consequences of their past lives. Aging hippie freak Zoyd Wheeler is revving up for his annual act of televised insanity when news reaches that his old nemesis, sinister federal agent Brock Vond, has come storming into Vineland at the head of a heavily armed Justice Department strike force. Zoyd instantly disappears underground, but not before dispatching his teenage daughter Prairie on a dark odyssey into her secret, unspeakable past. . . . Freely combining disparate elements from American popular culture—spy thrillers, ninja potboilers, TV soap operas, sci-fi fantasies—Vineland emerges as what Salman Rushdie has called in The New York Times Book Review "that rarest of birds: a major political novel about what America has been doing to itself, to its children, all these many years."

Thomas Gilovich offers a wise and readable guide to the fallacy of the obvious in everyday life. When can we trust what we believe—that "teams and players have winning streaks," that "flattery works," or that "the more people who agree, the more likely they are to be right"—and when are such beliefs suspect? Thomas Gilovich offers a guide to the fallacy of the obvious in everyday life. Illustrating his points with examples, and supporting them with the latest research findings, he documents the cognitive, social, and motivational processes that distort our thoughts, beliefs, judgments and decisions. In a rapidly changing world, the biases and stereotypes that help us process an overload of complex information inevitably distort what we would like to believe is reality.

Awareness of our propensity to make these systematic errors, Gilovich argues, is the first step to more effective analysis and action.

The contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come. This true story sets out to chronicle the terrifying encounters that a residential family has had with the creature known as Bigfoot. Accompanied by video, photographs, and audio evidence, the story is written in Christine's own words as it unfolds. According to the Bigfoot investigator they contacted, "They aren't going anywhere." As the world gets more crowded with us, "They" are left with less and less habitat. They have learned to live in the shadows and pass through the forests by our homes. After reading this book just ask yourself, what would you do if this happened to you?

This book is designed to engage students' interest and promote their writing abilities while teaching them to think critically and creatively. Dowden takes an activist stance on critical thinking, asking students to create and revise arguments rather than simply recognizing and criticizing them. His book emphasizes inductive reasoning and the analysis of individual claims in the beginning, leaving deductive arguments for consideration later in the course.

A riveting history of the epic orbital flight that put America back into the space race. If the United States couldn't catch up to the Soviets in space, how could it compete with them on Earth? That was the question facing John F. Kennedy at the height of the Cold War—a perilous time when the Soviet Union built the wall in Berlin, tested nuclear bombs more destructive than any in history, and beat the United States to every major milestone in space. The race to the heavens seemed a race for survival—and America was losing. On February 20, 1962, when John Glenn blasted into orbit aboard Friendship 7, his mission was not only to circle the planet; it was to calm the fears of the free world and renew America's sense of self-belief. Mercury Rising re-creates the tension and excitement of a flight that shifted the momentum of the space race and put the United States on the path to the moon. Drawing on new archival sources, personal interviews, and previously unpublished notes by Glenn himself, Mercury Rising reveals how the astronaut's heroics lifted the nation's hopes in what Kennedy called the "hour of maximum danger."

Did the Woodstock generation reject science—or re-create it? An

“enthraling” study of a unique period in scientific history (New Scientist). Our general image of the youth of the late 1960s and early 1970s is one of hostility to things like missiles and mainframes and plastics—and an enthusiasm for alternative spirituality and getting “back to nature.” But this enlightening collection reveals that the stereotype is overly simplistic. In fact, there were diverse ways in which the era's countercultures expressed enthusiasm for and involved themselves in science—of a certain type. Boomers and hippies sought a science that was both small-scale and big-picture, as exemplified by the annual workshops on quantum physics at the Esalen Institute in Big Sur, or Timothy Leary's championing of space exploration as the ultimate “high.” Groovy Science explores the experimentation and eclecticism that marked countercultural science and technology during one of the most colorful periods of American history. “Demonstrate[s] that people and groups strongly ensconced in the counterculture also embraced science, albeit in untraditional and creative ways.” —Science “Each essay is a case history on how the hippies repurposed science and made it cool. For the academic historian, Groovy Science establishes the ‘deep mark on American culture’ made by the countercultural innovators. For the non-historian, the book reads as if it were infected by the hippies' democratic intent: no jargon, few convoluted sentences, clear arguments and a sense of delight.” —Nature “In the late 1960s and 1970s, the mind-expanding modus operandi of the counterculture spread into the realm of science, and sh-t got wonderfully weird. Neurophysiologist John Lilly tried to talk with dolphins. Physicist Peter Phillips launched a parapsychology lab at Washington University. Princeton physicist Gerard O'Neill became an evangelist for space colonies. Groovy Science is a new book of essays about this heady time.” —Boing Boing

"The Wisdom Gone Beyond" is a commentary on the profound Heart Sutra. These teachings contain an extensive discussion of the perfection of wisdom trainings that help us go beyond both Samsara and Nirvana to discover the wisdom and compassion of complete enlightenment. The perfection of wisdom teachings are complementary to the thirty-seven awakening paths of Theravada Buddhism. The wisdom teachings are also indispensable in establishing the perfect view of emptiness necessary to practicing the two stages of the tantric sadhana.

A compelling story of place, Steward's Fork explores northwest California's magnificent Klamath Mountains—a region that boasts a remarkable biodiversity, a terrain so rugged that significant landscape features are still being discovered there, and a wealth of natural resources that have been used, and more recently abused, by humans for millennia. James K. Agee, a forest ecologist with more than fifty years experience in the Klamaths, provides a multidimensional perspective on this region and asks: how can we most effectively steward this spectacular landscape toward a sustainable future? In an engaging narrative laced with personal anecdotes, he introduces the dynamics of the Klamath's ecosystems, including its geology and diverse flora and fauna, and then discusses its native cultures and more recent inhabitants, laying out the effects of industries such as logging, mining, water development, and fishing. Assuming that people will continue to have a close tie to the Klamaths, Agee introduces the principles of restoration ecology to offer a vision of how we can responsibly meet the needs of both people and natural organisms, including plants, fish, and wildlife. This debate over the future of the Klamath's rich landscape widens into a provocative meditation on nature, culture, and our relationship with the earth itself.

Why Brilliant People Believe Nonsense Harper Collins

Last August, two men in rural Georgia announced that they had killed Bigfoot. The claim drew instant, feverish attention, leading to more than 1,000 news stories worldwide—despite the fact that nearly everyone knew it was a hoax. Though Bigfoot may not exist, there's no denying Bigfoot mania. With Bigfoot, Joshua Blu Buhs traces the wild and woolly story of America's favorite homegrown monster. He begins with nineteenth-century accounts of wildmen roaming the forests of America, treks to the Himalayas to reckon with the Abominable Snowman, then takes us to northern California in 1958, when reports of a hairy hominid loping through remote woodlands marked Bigfoot's emergence as a modern marvel. Buhs delves deeply into the trove of lore and misinformation that has sprung up around Bigfoot in the ensuing half century. We meet charlatans, pseudo-scientists, and dedicated hunters of the beast—and with Buhs as our guide, the focus is always less on evaluating their claims than on understanding why Bigfoot has inspired all this drama and devotion in the first place. What does our fascination with this monster say about our modern relationship to wilderness, individuality, class, consumerism, and the media? Writing with a scientist's skepticism but an enthusiast's deep engagement, Buhs invests the story of Bigfoot with the detail and power of a novel, offering the definitive take on this elusive beast.
