To most people, cars are just appliances to be disposed of when they rust, become unreliable, or are outgrown. But to car people, it's different. Cars are like photographs that occupy physical space. They hold aromas that trigger memories, and remind us of who we once were. In addition, to some people, the relationship with the car itself is a real thing. Many enthusiasts pine for the cars of their youth, regret that they ever let them go, and yearn and search for them the way people do with old lovers, hoping to find them and rekindle that old spark. In *Resurrecting Bertha*, Rob Siegel assures you that this is normal (well, as normal as anything is with car people), and embarks on this journey himself. Writing in his trademark Hack Mechanic voice that's enthralled readers for 35 years, Rob describes his original eight-year relationship with his highly-modified 1975 BMW 2002 "Bertha," selling the car to a dear friend, its 26 years of storage, and buying it back in a weak whisky-soaked moment only to experience the "oh dear God what did I just do" regret when he raises the long-closed garage door and comes face-to-face with the badly deteriorated car. The book details the steps Rob went through to get the car running, then driving, then sufficiently sorted to make a 2000-mile drive, and how the reconnection with the car was so much deeper than he expected. *Resurrecting Bertha* is about more than just the nuts and bolts; it's about deciding what's important, the joy of doing good, and how, if you do it right, not only can you go home again, but you can do so in the same car.

Height 1079 was the name of the mountain where the nine members of the Dyatlov trekking group perished in 1959. The bizarre circumstances of their death and the ensuing frenzy surrounding the incident brought to attention the original name given to the place by the local Mansi people - Kholat Syakhl, or Dead (Barren) Mountain. Until now, there has been no plausible explanation of what actually happened on that fateful night of February 1, 1959. This book offers a startling new theory, based on well-documented evidence rather than wild speculations, that finally ties together all of known facts about the Dyatlov mystery into a credible sequence of causes and effects. Lodusky McFarland

Deep in her heart was death which believed that a life like hers could be perfect no more with such a ruinous start. Brokenness was all that she knew growing up, threatening callousness of heart. A modern-day Cinderella was make-believe as an opiate of our senses towards the cruelty of life. No good things would last, she came to believe. So, her safest bet was not to strive for them lest her fall would be more crippling from a greater height when life came crushing down on her again. By this she effectively put a curse on herself as she shut out future blessings that could have been hers. Life was an unknown and she did not know how it would turn out. To break this curse, she needed courage, faith and trust to respond to the call of love and let its transforming power to take hold of her so that she could blossom into the person she could be. It did not promise plain sailing but riding through the storms, big and small, was the way of perfecting. To break hopelessness is having the faith to hope. She summoned all her courage to take this bumpy ride on invitation. Did she waver in her resolve? Did she manage to persevere? What did she discover about herself? Where would this bold step finally take her in life?

A legend in the car industry reveals the philosophy that's starting to turn General Motors around. In 2001, General Motors hired Bob Lutz out of retirement with a mandate to save the company by making great cars again. He launched a war against penny pinching, office politics, turf wars, and risk avoidance. After declaring bankruptcy during the recession of 2008, GM is back on track thanks to its embrace of Lutz's philosophy. When Lutz got into the auto business in the early sixties, CEOs knew that if you captured the public's imagination with great cars, the money would follow. The car guys held sway, and GM dominated with bold, creative leadership and iconic brands like Cadillac, Buick, Pontiac, Oldsmobile, GMC, and Chevrolet. But then GM's leadership began to put their faith in analysis, determined to eliminate the "waste" and "personality worship" of the bygone creative leaders. Management got too smart for its own good. With the bean counters firmly in charge, carmakers (and much of American industry) lost their single-minded focus on product

excellence. Decline followed. Lutz's commonsense lessons (with a generous helping of fascinating anecdotes) will inspire readers at any company facing the bean counter analysis-paralysis menace.

In the early-1960s Opel displayed a dramatically styled GT concept car at the Frankfurt Motor Show. Public reaction was positive and so it was put into production as the Opel GT in 1968. The initial model was based on the B-Series Opel Kadett and withdrawn after two years. The larger engined 1900GT was much better, but all cars left the factory with left-hand drive. However, it was never a big seller and was withdrawn from the market altogether in 1973. This is a book of contemporary road and comparison tests, new model introductions, development, buying second hand, technical and specification data, long-term tests. Covers the GT and GT/J.
