Once upon a time, it was the lone scientist who achieved brilliant breakthroughs. No longer. Today, science is done in teams of as many as hundreds of researchers who may be scattered across continents and represent a range of hierarchies. These collaborations can be powerful, but they demand new ways of thinking about scientific research. When three hundred people make a discovery, who gets credit? How can all collaborators' concerns be adequately addressed? Why do certain STEM collaborations succeed while others fail? Focusing on the nascent science of team science, *The Strength in Numbers* synthesizes the results of the most far-reaching study to date on collaboration among university scientists to provide answers to such questions. Drawing on a national survey with responses from researchers at more than one hundred universities, anonymous web posts,

archival data, and extensive interviews with active scientists and engineers in over a dozen STEM disciplines, Barry Bozeman and Jan Youtie set out a framework to characterize different types of collaboration and their likely outcomes. They also develop a model to define research effectiveness, which assesses factors internal and external to collaborations. They advance what they have found to be the gold standard of science collaborations: consultative collaboration management. This strategy—which codifies methods of consulting all team members on a study's key points and incorporates their preferences and values—empowers managers of STEM collaborations to optimize the likelihood of their effectiveness. *The Strength in Numbers* is a milestone in the science of team science and an indispensable guide for scientists interested in maximizing collaborative success.

Even though ESP is not a new phenomenon in Indonesia, many teachers still face a lot of challenges in real classroom implementation and practices. Many scholars also have claimed that ESP is a part of ELT like General English (GE). Both have something in common but to some extent they also have differences. Therefore, the ESP pedagogy and approaches should also be treated differently from the pedagogy of other ELT types such as GE.

This book hopefully provides some insight to teachers who need to shift between GE and ESP. The ideas of ESP are mostly derived from the research project conducted by the English Language Education Department under the supervision of Dwi Poedjiastutie and Laela Hikmah Nurbatra. These researches mainly focus on ESP teaching at the University of Muhammadiyah Malang under the auspice of the Language Centre. The research selected for this book covered a different range of ESP topics. In the first chapter of the book, the Poedjiastutie discusses the ESP teacher recruitment process at one of the universities in Indonesia. Indonesia is one of the countries that had also been developing ESP projects in vocational schools, academies and universities. Many teachers of EFL make the transition to teach ESP because the number of students who need ESP learning is increasing from year to year. The curriculum and the pedagogy of the teaching institution need to adapt to the situation. When the curriculum fails to identify the need and the demand of ESP in this university, the ESP system needs serious attention since teachers is a central role in the education system.
