The "meticulously researched, elegantly argued and deeply humane" sequel to the landmark volume of social history, *The Making of the English Working Class* (The New York Times Book Review). This remarkable study investigates the gradual disappearance of a range of cultural customs against the backdrop of the great upheavals of the eighteenth century. As villagers were subjected to a legal system increasingly hostile to custom, they tried both to resist and to preserve tradition, becoming, as E. P. Thompson explains, "rebellious, but rebellious in defense of custom." Although some historians have written of riotous peasants of England and Wales as if they were mainly a problem for magistrates and governments, for Thompson it is the rulers, landowners, and governments who were a problem for the people, whose exuberant culture preceded the formation of working-class institutions and consciousness. Essential reading for all those intrigued by English history, *Customs in Common* has a special relevance today, as traditional economies are being replaced by market economies throughout the world. The rich scholarship and depth of insight in Thompson's work offer many clues to understanding contemporary changes around the globe. "[This] long-awaited collection . . . is a signal contribution . . . [from] the person most responsible for inspiring the revival of American labor history during the past thirty years." —The Nation "This book signals the return to historical writing of one of the most eloquent, powerful and independent voices of our time. At his best he is capable of a passionate, sardonic eloquence which is unequalled." —The Observer

The manuscripts in this book were generated from a conference occurring at the University of Heidelberg in September 1996. These manuscripts have been reviewed and updated by the designated authors in late 1997 for publication in early 1998. Conferences occur for a variety of reasons. These include the need to exchange information where complex activities are undergoing reassessment or change. For the emergency and critical care management of stroke this is certainly the situation. Today, both the primary care and the neurologic physician must provide medical care in an environment where daily change in the knowledge base of: brain function, disease mechanism(s), therapeutic efficacy, and cost control are all occurring. In addition, patient advocacy has become increasingly complex because government, employers, insurers, health care providers as well as families all desire a voice in the physician relationship with the patient. Our conference subject was the organization of rapid care delivery and the development of a rational basis for treatment of a previously untreatable disorder acute stroke. Thus, the obvious need for multiple open and free discussions about priority setting and modification of current treatment plans. Clearly, the face to face opportunities provided by this first conference on Emergency Management And Critical Care Of Stroke (EMACCOS) are required when patient care issues are as complex as these. Neuroscience is new to the experience of active therapeutic intervention.

The Law and Policy of Ecosystem Services is the first comprehensive exploration of the status and future of natural capital and ecosystem services in American law and policy. The book develops a framework for thinking about ecosystem services across their ecologic, geographic, economic, social, and legal dimensions and evaluates the prospects of crafting a legal infrastructure that can help build an ecosystem service economy that is as robust as existing economies for manufactured goods, natural resource commodities, and human-provided services. The book examines the geographic, ecological, and economic context of ecosystem services and provides a baseline of the current status of ecosystem services in law and society. It identifies shortcomings of current law and policy and the critical areas for improvement and forges an approach for the design of new law and policy for ecosystem services. Included are a series of nine empirical case studies that explore the problems caused by society's failure to properly value natural capital. Among the case study topics considered are water issues, The Conservation Reserve Program, the National Conservation Buffer Initiative, the agricultural policy of the European Union, wetland mitigation, and pollution trading. The Law and Policy of Ecosystem Services is a groundbreaking look at the question of whether and how law and policy can shape a sustainable system of ecosystem service management. It is an accessible and informative work for faculty, students, and policy makers concerned with ecology, economics, geography, political science, environmental studies, law, and related fields.

Surface-mount technology (SMT) is a method for producing electronic circuits in which the components are mounted or placed directly onto the surface of printed circuit boards (PCBs). An electronic device so made is called a surface-mount device (SMD). In the industry it has largely replaced the through hole technology (THT). SMT comes into existence because our earlier version of Through Hole Manufacturing Technology (THT) were having following limitations: 1.Large in Size 2.Only one side of PCB can be used 3.Lesser functions 4.Automation of PCB Assembly restricted 5.Cross Talk becomes predominating factor at Higher Frequency, restricting evolution of Mobile Technology.

"[A] lifelong Southerner . . . exposes the culinary and cultural last rites of the deep South . . . as sidesplitting as it is politically incorrect." —Publishers Weekly, starred review A hilarious guide to the intricate rituals, customs, and etiquette surrounding death in the South—and a practical collection of recipes for the final send-off. As author and southerner Gayden Metcalfe assert that people in the Delta have a strong sense of community, and being dead is no impediment to belonging to it. Down south, they don't forget you when you've up and died—they may even like you better and visit you more often! But just as there is an appropriate way to live your life in the South, there is a tasteful way of departing it. The funeral is the final social event of your existence so it must be handled flawlessly. Gayden Metcalfe, native of Greenville, MS, is steeped in the stories and traditions of this rich region. She reminisces about the prominent family that drank too much and got the munchies the night before the big event—and left not a crumb for the funeral. Then there was the lady who allocated money to have "Home on the Range" sung at the service, and the family that insisted on a portrait of their mother in her casket. Each chapter ends with an authentic southern recipe that will come in handy if you "plan to die tastefully", including Boiled Bourbon Custard; Aunt Hebe's Coconut Cake; Pickled Shrimp; Homemade Mayonnaise; and Homemade Rolls. "Sure to have Southern hostesses nodding their perfectly coiffed heads in unison." —USA Today "If you want a good laugh . . . pick up a copy." —Washington Post
