Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US,on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

This second volume builds on the initial groundwork laid by Ecocinema Theory and Practice by examining the ways in which ecocritical cinema studies have matured and proliferated over the last decade, opening whole new areas of study and research. Featuring fourteen new essays organized into three sections around the themes of cinematic materialities, discourses, and communities, the volume explores a variety of topics within ecocinema studies from examining specific national and indigenous film contexts to discussing ecojustice, environmental production studies, film festivals, and political ecology. The breadth of the contributions exemplifies how ecocinema scholars worldwide have sought to overcome the historical legacy of binary thinking and intellectual norms and are working to champion new ecocritical, intersectional, decolonial, queer, feminist, Indigenous, vitalist, and other emergent theories and cinematic practices. The collection also demonstrates the unique ways

that cinema studies scholarship is actively addressing environmental injustice and the climate crisis. This book is an invaluable resource for students and scholars of ecocritical film and media studies, production studies, cultural studies, and environmental studies.

From the Preface: The following pages provide a narrative analysis of the U.S. Army's development of armored organizations and their related doctrine, materiel, and training activities in the period 1917-1945. This period marked the emergence of clear principles of armored warfare that became the underpinning of the Armor Branch, influencing armored developments long after World War II ended. A unique style of mounted maneuver combat emerged that reflected a mix of tradition an innovation. In the process, American military culture changed, particularly through the adoption of combined-arms principles. Conversely, political actions, budgetary considerations, and senior leadership decisions also shaped the course of armor development. The emergence of an American armored force involved more than simply tank development. It included the creation of an armored division structure steeped in combined-arms principles, organizational flexibility, and revolutionary command and control processes. Parallel developments included the establishment of specialized units to provide antitank, reconnaissance, and infantry support capabilities. Several Army branches played a role in determining the precise path of armored development, and one of them-the Cavalry-became a casualty as a result.

It is the purpose of this paper to describe a neutron detector suitable for monitoring a flux of neutrons whose energy is greater than about 50 Mev. Detection of the neutrons is accomplished by their ability to induce fission in heavy elements. Kelly and Wiegand studied the neutron fission

of Bi, Pb, Ti, Hg, Au, and Pt at various neutron energies and the presently described counter is an application of this work.

As scientific analysis of testable hypotheses has replaced the speculative approach to study of bone disease in recent and fossil amphibians and reptiles, the field has advanced from simply reporting observations to analyzing their implications. This process is predicated upon a reproducible data base which explains/diagnoses the nature of bony alterations and a secure review of the literature. Thereby hangs the rub. The herpetological literature are difficult to access (let alone read) and are scattered through many prominent and eclectic journals and in the lay literature. While older diagnoses often have not stood the test of time, the clarity of report descriptions usually allows confident identification of the underlying pathology.

This book devotes a chapter to each RTK family and the multiple receptors within each family, thoroughly covering all of the RTKs. The chapters all follow the same structure, presenting this essential information in an accessible and user-friendly format. Each chapter covers one specific family of receptors and begins with a general introduction to that family and a comprehensive discussion of that receptor’s family in development and human disease. Following are in-depth analyses of each family’s receptors with discussions on the gene, protein, ligands, activation, and signaling pathways along with discussion of receptor processing and signal attenuation. Further, cross talk with other receptors systems, post-translational modification and specific unique characteristics to each RTK are discussed. Because it isolates and explains each family, this book is an essential companion volume to Receptor Tyrosine Kinases: Structure, Functions and Role in Human Disease, by the same authors, which talks about RTKs more generally and without the family-by-family detail.

As part of the Vision for Space Exploration (VSE), NASA is planning for humans to revisit the Moon and someday go to Mars. An important consideration in this effort is protection against the exposure to space radiation. That radiation might result in severe long-term health consequences for astronauts on such missions if they are not adequately shielded. To help with these concerns, NASA asked the NRC to further the understanding of the risks of space radiation, to evaluate radiation

shielding requirements, and recommend a strategic plan for developing appropriate mitigation capabilities. This book presents an assessment of current knowledge of the radiation environment; an examination of the effects of radiation on biological systems and mission equipment; an analysis of current plans for radiation protection; and a strategy for mitigating the risks to VSE astronauts.

With tenderness and incisive insight, Leavitt spotlights a woman's unexpected journey towards her art." –Madeline Miller, author of Circe A Best Book of the Month: Bustle * PopSugar New York Times bestselling author Caroline Leavitt writes novels that expertly explore the struggles and conflicts that people face in their search for happiness. For the characters in With or Without You, it seems at first that such happiness can come only at someone else’s expense. Stella is a nurse who has long suppressed her own needs and desires to nurture the dreams of her partner, Simon, the bass player for a rock band that has started to lose its edge. But when Stella gets unexpectedly ill and falls into a coma just as Simon is preparing to fly with his band to Los Angeles for a gig that could revive his career, Simon must learn the meaning of sacrifice, while Stella’s best friend, Libby, a doctor who treats Stella, must also make a difficult choice as the coma wears on. When Stella at last awakes from her two-month sleep, she emerges into a striking new reality where Simon and Libby have formed an intense bond, and where she discovers that she has acquired a startling artistic talent of her own: the ability to draw portraits of people in which she captures their innermost feelings and desires. Stella’s whole identity, but also her role in her relationships, has been scrambled, and she has the chance to form a new life, one she hadn’t even realized she wanted. A story of love, loyalty, loss, and resilience, With or Without You is a page-turner that asks the question, What do we owe the other people in our lives, and when does the cost become too great?
