During the Second World War, the Royal Navy's flotillas of small, fast and powerfully armed motor gun boats (MGBs) were looked upon as the 'Spitfires of the Seas'. Operating from their harbour bases around the south and east coasts of England, RN Coastal Forces crews would set out under cover of darkness to look for trouble with German shipping in the Channel and the North Sea. The vicious close-quarter skirmishes that ensued were every bit as deadly as the aerial dogfights acted out at 30,000 ft by their RAF Spitfire contemporaries. Written by the curator of MGB 81, with contributions from other specialists involved with the boat, the Royal Navy Motor Gun Boat Owners' Workshop Manual is published in association with the Portsmouth Naval Base Property Trust and fully illustrated with archive photos, technical drawings and detailed photography of MGB 81.

**MGB Owners' Workshop Manual** Haynes Manuals

This is the inside story of the MG Design office, from 1956 until its closure in 1980. Explaining how the various models were drawn, planned, and developed by the small team of engineers, it also shows how the input and control changed from Morris, Wolseley, Riley Group, Austin-Morris, and Austin Rover. The effects of the Triumph-Austin merger are detailed in model changes, alongside the effects of safety legislation, mainly imposed by the United States. Trying to remain as individual as possible during this period, MG developed record breakers and a unique Competition Department. Special cars were built and tested, and prototypes for the MGB replacement were drawn up – all in parallel with the development of MG production cars using engines from any part of the BMC company. The continuing support of the American market was essential and much valued, but the company's market support prioritised the TR7 – a decision that, ultimately, led to the closure of a successful, happy company.
