Motor Sport David and Charles

A collection of heartwarming personal stories from MG owners around the world. Read about the Berkshire restorer who saw a heap of old iron in the bushes and realized it used to be a 1926 bullnose Super Sports; and the seven-year-old boy in Norfolk, Virginia, who read a book called The Red Car and knew that one day he would have to have a TC; and the Dutch boy who saw an MGB on his way to school and knew something similar. There's the nine-year-old French boy whose nan gave him a model kit to assemble; and the USAF fighter pilot who saw his first MG in Britain during the war and was in love for ever. A Canadian took 32 years to restore his TA, while a Swiss professor installed space-ship electronics in his TD. An aeronautical engineer was left some money and bought a 1929 18/80 Tourer that he thought had been restored. An Australian 17-year-old happened across a second-hand MGB, was done for speeding, and lived happily ever after. A Swedish boy walked out one Sunday morning into the middle of an MG rally. All the stories are different, but the storytellers have something in common: They would all rather love—and sometimes despair of—a wonderful vehicle with faults in its character, than have no feelings about one that has no character at all. Praise for Me and My MG "A loving look at one of Britain's most iconic motors—brilliant photographs interspersed with personal reminiscences and memories—a book to be treasured." —Books Monthly (UK)

What We Know about High School Reading Princeton Book Company Publishers

Biological systems are inherently stochastic and uncertain. Thus, research in bioinformatics, biomedical engineering and computational biology has to deal with a large amount of uncertainties. Fuzzy logic has shown to be a powerful tool in capturing different uncertainties in engineering systems. In recent years, fuzzy logic based modeling and analysis approaches are also becoming popular in analyzing biological data and modeling biological systems. Numerous research and application results have been reported that demonstrated the effectiveness of fuzzy logic in solving a wide range of biological problems found in bioinformatics, biomedical engineering, and computational biology. Contributed by leading experts world-wide, this edited book contains 16 chapters presenting representative research results on the application of fuzzy systems to genome sequence assembly, gene expression analysis, promoter analysis, cis-regulation logic analysis and synthesis, reconstruction of genetic and cellular networks, as well as biomedical problems, such as medical image processing, electrocardiogram data classification and anesthesia monitoring and control. This volume is a valuable reference for researchers, practitioners, as well as graduate students working in the field of bioinformatics, biomedical engineering and computational biology. *MGA Restoration Guide* Philadelphia : Chilton Books

The MGA truly marked a revolution in MG sports car design, with its appearance quite unlike any previous production car from the celebrated British marque. Entering production in the summer of 1955, it broke with the time-honoured tradition of narrow-gutted, flat-sides, upright styling, with the distinctive large grille, exposed headlamps, separate wings and sharply cut-off tail that had serviced the majority of MG sports cars for well over thirty years. Many die-hard MG enthusiasts of the time were understandably outraged, but the decision to break with tradition proved to be a good one: over 100,000 cars were produced over the model's seven-year lifetime.

This book, from celebrated author David Knowles covers: the circumstances that led to the momentous decision to make such a fundamental design change; the production, publicity and evolution of each and every MGA variant from launch in 1955 to the end of production in 1962, with specification tables for each model; profiles of the people who had crucial roles in the development of the MGA and finally, the largely untold story of overseas assembly in

Australia, Ireland, Mexico and South Africa. It offers comprehensive coverage of racing and rallying in Europe, including the MGA entries at Sebring Twelve Hour race and where many of the cars ended up, and will be of great interest to all motoring enthusiasts and those particularly interested in MG. It is extensively illustrated with 200 colour and 300 black & white photographs, much of it drawn from archives and family collections, as well as photoshoots specially commissioned for this book. David Knowles has been researching and writing about British cars for over twenty-five years.

Historic Racing Cars in Australia Herridge & Sons Limited This is the story of Hap Adams, a teenage boy who finds a beat-up MG TC sports car, restores it, and learns the joys of sports cars and driving from the town mechanic, Frenchy Lascelle.

It has been clear for many years that the ways in which archaeology is practised have been a direct product of a particular set of social, cultural, and historical circumstances - archaeology is always carried out in the present. More recently, however, many have begun to consider how archaeological techniques might be used to reflect more directly on the contemporary world itself: how we might undertake archaeologies of, as well as in the present. This Handbook is the first comprehensive survey of an exciting and rapidly expanding sub-field and provides an authoritative overview of the newly emerging focus on the archaeology of the present and recent past. In addition to detailed archaeological case studies, it includes essays by scholars working on the relationships of different disciplines to the archaeology of the contemporary world, including anthropology, psychology, philosophy, historical geography, science and technology studies, communications and media, ethnoarchaeology, forensic archaeology, sociology, film, performance, and contemporary art. This volume seeks to explore the boundaries of an emerging sub-discipline, to develop a tool-kit of concepts and methods which are applicable to this new field, and to suggest important future trajectories for research. It makes a significant intervention by drawing together scholars working on a broad range of themes, approaches, methods, and case studies from diverse contexts in different parts of the world, which have not previously been considered collectively.
