Project Management Rosetta Books

From the era-defining author of Generation X comes a novel of overworked coders who escape the serfdom of Bill Gates to forge their own path. They are Microserfs—six code-crunching computer whizzes who spend upward of sixteen hours a day “coding” and eating “flat” foods (food which, like Kraft singles, can be passed underneath closed doors) as they fearfully scan company e-mail to learn whether the great Bill is going to “flame” one of them. But now there’s a chance to become innovators instead of cogs in the gargantuan Microsoft machine. The intrepid Microserfs are striking out on their own—living together in a shared digital flophouse as they desperately try to cultivate well-rounded lives and find love amid the dislocated, subhuman whir and buzz of their computer-driven world.

Steve details his descent from bright star to burnout in this newly repackaged edition of the definitive, highly acclaimed novel from the creator of Veronica Mars and Party Down. Houston, sophomore year: Steve is on top of the world. He and his friends are

the talk of the school. He’s in love with a terrific girl. He can even deal with “the astronaut”—a world-famous hero who happens to be his father. San Diego, senior year: Steve is bummed out, drugged out, flunking out. A no-nonsense counselor says he can graduate if he writes a 100-page paper. So Steve starts writing, and as the paper becomes more and more personal, he reveals how a National Merit Scholar has become an under-achieving stoner. And in telling how he got to where he is, Steve discovers how to get to where he wants to be.

The rapid takeoff of the continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems. This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties.

Artificial Intelligence in the 21st Century Orbit How do the rich get rich? An updated edition of the “remarkable” New York Times bestseller, based on two decades of research (The Washington Post). Most of the truly wealthy in the United States don’t live in Beverly Hills or on Park Avenue. They live next door. America’s wealthy seldom get that way through an inheritance or an advanced degree. They bargain-shop for used cars, raise children who don’t realize how rich their families are, and reject a lifestyle of flashy exhibitionism and competitive spending. In fact, the glamorous people many of us think of as “rich” are actually a tiny minority of America’s truly wealthy citizens—and behave quite differently than the majority. At the time of its first publication, *The Millionaire Next Door* was a groundbreaking examination of America’s rich—exposing for the first time the seven common qualities that appear over and over among this exclusive demographic. This edition includes a new foreword by Dr. Thomas J. Stanley—updating the original content in the context of the financial

crash and the twenty-first century. “Their surprising results reveal fundamental qualities of this group that are diametrically opposed to today’s earn-and-consume culture.” —Library Journal

Where it Touches the Ground Penguin

In the late 1950s, a young John Morton was transfixed with sports car racing. His dreams of competition eventually led him to enroll, in 1962, in the Shelby School of High Performance Driving. In a bold moment after the last class, Morton asked Carroll Shelby if he might come to work for the newly formed Shelby American. The answer was “Yes, here's a broom.” Thus ended Morton's college career and began his long racing career. Over the next three years, Morton would be a firsthand witness to the evolution of one of the most iconic sports car builders and racing teams of the 1960s. Inside Shelby American is his personal account of a company overflowing with talent, from designer Pete Brock to fabricator extraordinaire Phil Remington to drivers like Dan Gurney, Ken Miles, Bob Bondurant, and Phil Hill. The cars were equally captivating: AC Cobra, Mustang GT350, Ford GT, Daytona Coupe. In this book, Morton’s story is intertwined with the memories of other Shelby staffers of the period, revealing through historic photography and an untold perspective the rousing story of America’s most legendary racer and car builder.

The world needs clean and renewable energy and hydrogen represents an almost ideal resource. Hydrogen is the simplest and most abundant molecule in the universe, yet one that is a challenge to produce from renewable resources. Biohydrogen, or hydrogen produced from renewable resources such as water or organic wastes by biological means, is a goal worthy of increased global attention and resources. The purpose of BioHydrogen '97 was to bring together leaders in the biological production of hydrogen from the United States, Japan, Europe, and elsewhere to exchange scientific and technical information and catalyze further cooperative programs. Participants came from at least different countries representing academia, industry, and government. Especially important participants were young research scientists and engineers: the next generation of contributors. The conference consisted of plenary presentations, topical sessions, posters, and mini-workshop discussions on key areas of biohydrogen. It was designed to maximize information exchange, personal interaction among participants, and formulate new international initiatives. BioHydrogen '97 was an outgrowth of an international workshop convened by the Research Institute of Innovative Technology for the Earth (RITE) and was held in Tokyo, Japan, November 24-25, 1994. The RITE workshop was highly successful but largely limited to traditional biochemical and biological studies and not engineering research topics.

Austin College Pan Macmillan

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Austin College has a heritage that is unsurpassed in the history of Texas higher education. Named in memory of Stephen F. Austin, it received a charter from the State of Texas in 1849, making the school the oldest college or university in the state operating under its original name and charter. Sam Houston, Anson Jones, and Henderson Yoakum served on its original board of trustees. The college first held classes in Huntsville during the fall of 1850 and moved to Sherman in 1876. Today the school is a nationally ranked private liberal arts college committed to leadership, learning, and lasting values that brings a global perspective to its student body and programs.
