which in turn improves business case success. The book addresses all three layers of portfolio, program, and project within an integrated governance framework, and it answers the fundamental questions everyone involved in 3P governance must address: What governance structures (processes, functions, roles, responsibilities)

need to be in place to ensure optimal portfolio investment outcomes? How do I know our portfolios, as structured, will deliver expected benefits and value? What should senior management be doing, acting in their portfolio governance roles, to deliver great portfolio outcomes? The book introduces and describes a number of important

Press Knapp's CONTEMPORARY AUDITING, 11E prepares readers for the challenging responsibilities faced in the public accounting profession. This casebook stresses the people aspect of independent audits. Readers learn how to avoid audit failures most often due to client personnel who intentionally subvert an audit or auditors who

fail to carry out their responsibilities. A detailed review of problem audits helps readers recognize the red flags common to failed audits. Discussing and dissecting these challenges prepares readers to handle potential problematic situations in their own professional careers. Readers also acquire a higher-level

understanding of auditing standards, ethical principles, audit procedures, and other issues related to independent auditing. By studying these topics in a real-world context, readers achieve a more in-depth, intuitive comprehension of auditing fundamentals, which translates into improved performance on the CPA

Simple Solutions: For Planet Earth is a scientific book written in a popular style for the average reader. You have read about Peak Oil and Global Climate Warming, and complained about

\$4/gallon gasoline, but how really serious are these headlines and annoyances? The author has worked his entire career on: the science, technology, education, administration and politics of these subjects, and crystallizes this complex field into understandable elements, providing simple solutions for humanity. Does it make sense for the

renewable energy budget of the Federal Government to be about \$1 billion/year when: o Annual tax incentives and government programs for the oil industry are supposedly in the range between \$38 billion and \$115 billion, although Lester Brown says \$210 billion in 2005. o Farm subsidies alone in 2004 cost taxpayers \$16.2
