Mary Carlson didn't start out to become a veterinarian, let alone the owner and caretaker of cats (many), dogs (two, both huskies), and horses (some with manners, some without) in Colorado. She was a suburban Chicago girl; all she knew of the

American West came from the stories her uncle, who had settled in northern Colorado, told her during his annual visits. But thanks to him, she ended up moving to Fort Collins, Colorado for college—and after falling in love with a man she'd become friends with in her final year of college, when he was a student at the CSU School of Veterinary Medicine, she remained there. Watching the work Earl did as a veterinarian inspired Mary to eventually leave her tenured teaching position and enter vet school, after which she opened her own, feline-exclusive clinic. Along the way, there were numerous pets, grueling years of vet school, a shattered hip, an enduring love, illness, and death—and the rediscovery that life, especially a life full of delightful animals, is worth living.

"The three authors of this edition-Denise Anderson, Sarah Salm, and Deborah Allen-may be a set of individuals with different insights and unique experiences, but their cooperative relationship defines the word "team." What drives them is a single shared goal: to create the most learning-friendly introductory microbiology textbook available. Each author carefully read all the chapters, looking for parts that could be tweaked for clarity. They did this with students in mind, suggesting simpler words where appropriate while maintaining the scientific rigor so important for today's healthcare professionals. Meanwhile, Gene Nester continued to serve as "team member emeritus," keeping an eagle eye out for updates that could be incorporated into the text. His work established the text's reputation for excellence over the decades, and it lives on in this edition"--
