In 2003, when a
mysterious
ancient chamber

beneath the
Romanian Sphinx
in the Bucegi
Mountains, it
became a state
secret of the
highest level for
Romania and their
new partner, the
United States,
whose advanced
technology
enabled the

discovery to take place. The primary custodial agency of this remarkable chamber full of holographic technology is Department Zero, a secret service unit that answers only to the Romanian president. Ever since, there has been a continuous and persistent effort by certain Romanian and American factions to undermine the authority of Department Zero in order to gain access to and control this technology. The Secret Parchment — Five Tibetan Initiation Techniques tells

the story of the detailed political intrigues behind this remarkable find and also how these matters have been subject to intervention by superior spiritual forces, one of which concerns the arranged discovery of an ancient Tibetan manuscript which is revealed and explained in this book. After the ancient manuscript is translated, a mysterious antenna-like structure reveals itself as a result of melting ice near a secret American base in Antarctica. Acting as some sort of cosmic

buoy, it has an energy signature connecting both to Jupiter's moon, Europa, and an area of Transylvania where the remains of an ancient civilization were uncovered in 1990 amidst vast tunnels of solid gold. Long ago classified as the top state secret of Romania, this location becomes the center of intrigue in and around Department Zero. Although not actually penetrating the underground area itself, Peter Moon visits the general area and determines that

this ancient civilization is still very much alive and active. Atlas of Microstructures of Industrial Alloys ASM International (OH) This book gathers a collection of papers summarizing some of the latest developments in the thermomechanical processing of steels. The replacement of conventional rolling plus

post-rolling heat treatments by integrated controlled forming and cooling strategies implies important reductions in energy consumption, increases in productivity and more compact facilities in the steel industry. The metallurgical challenges that this integration implies, though,

relevant and impressive developments that have been achieved over the last 40 years. The frequency of the development of new steel grades and processing technologies devoted to thermomechanically processed products is increasing, and their implementation is being expended to higher value added

products and applications . In addition to the metallurgical peculiarities and relationships between chemical composition, process and final properties, the relevance impact of advanced characterization techniques and innovative modelling strategies provides new tools to achieve the further deployment of the TMCP technologies . The contents of the book cover low carbon microalloyed grades, ferritic stainless steels and Fe-Al-Cr alloys, medium-Mn steels, and medium carbon grades. Authors of the chapters of this "Thermomechanical Processing of Steels" book represent some of the most relevant research groups from both the steel industry and academia. Thomas Register of American Manufacturers and Thomas Register Catalog File Sky Books (NY)

For millennia the seven stars known as the Pleiades have twinkled in the night

sky, inspired countless legends and dared Mankind to discover their secrets. Encounter in the Pleiades is the story of a man who was taken to the Pleiades and given a scientific education far beyond the horizons of anything taught in universities. For the first time, the personal history of Preston Nichols is revealed along with an avalanche of amazing information the world has not yet heard. A new look at Einstein gives insights into the history of physics and how the speed of light can be surpassed through the principles of reality engineering. New concepts in science are offered

with technical but simple descriptions even the layman can understand. These include the creation of alternate realities through the use of twisters and spinners; mind control aspects of the Star Wars defence system; implants; alien abductions and much more. Peter Moon adds further intrigue to the mix by divulging his part in a bizarre project which led him to Preston Nichols and the consequent release of information. His account of the role of the Pleiades in ancient mythology sheds new light on the current predicament of Mankind and offers a path of hope for the

future.

Haunting, gripping, and psychologically fierce tales that illuminate an unsettling side of humanity from “one of the treasures of American story writing” (Jonathan Lethem). Featuring the O. Henry Prize – winning short story “Windeye,” this collection of Brian Evenson’s masterful stories “involve impossible scenarios and alternative realities” that are “always surprising” (Bookforum). A woman falling out of sync with the world; a king’s servant hypnotized by his murderous horse; a transplanted ear with a mind of its own—the characters in these

twenty-five stories live as interlopers in a world shaped by mysterious disappearances and unfathomable discrepancies between the real and imagined, revealing the breadth and depth of Evenson’s uncanny vision.

The steelmaking industry and its customers have benefited enormously from the many significant technological advances of the last thirty years. As their customers become ever more quality conscious, however, steelmakers must continue their efforts to minimize harmful impurities, minimize as well as modify harmful nonmetallic inclusions and achieve the optimum casting temperature, content of alloying elements,

and homogeneity.

These improvements can come only through the diverse refinement processes that together comprise "secondary steelmaking."

Secondary Steelmaking: Principles and Applications reviews the scientific fundamentals and explores the various unit processes associated with secondary steelmaking. Synthesizing the science and its technology, the author examines the relevant reactions and phenomena, presents an integrated picture of "clean steel" manufacture, and provides an overview of the mathematical modeling important to process research. Solved examples, ample references, and summaries of recent technological advances

mean that the steelmaking industry finally has a comprehensive reference, in English, for the all-important secondary steelmaking processes. Students and instructors, steelmakers and R & D engineers will welcome the author's readable style, his knowledge, and his expertise, all gleaned from decades of experience in research, academic, and industrial settings.
