Practically, with the MIC 10 in the field I have found that 320 grit is more than adequate for the normal range of constructional steels. However, if I have difficulty delineating the HAZ clearly I will go one or two steps further, but nothing approaching a mirror finish. There is no hard and fast rule, other than etch it and see after each stage.

The Zwick MICRODUR MIC 10 is a portable hardness tester which uses the UCI (Ultrasonic Contact Impedance) method for quick, convenient measurements - simply locate the sensor, then read off the measured value. The test indentation of the Vickers diamond in the material surface is measured electronically and immediately displayed digitally as a hardness value no time-consuming extra steps such as optical evaluation with a microscope.
