This book provides a comprehensive and analytical overview of the development of

economic theory from its beginnings, at the end of the Middle Ages, up to contemporary contributions. Traditional theories are presented as living matter, and modern theories are presented as part of a historical process and not as established truths. In this way, the book avoids the dangerous dichotomy between pure historians of thought who dedicate themselves exclusively to studying facts, and pure theorists who are interested in the

evolution of the logical structure of theories. The second edition contains several changes and additions. The authors give due consideration to the "civil economy" perspective developed during Humanism and the Renaissance. The section on Adam Smith has been considerably extended and improved. The treatment of the post-keynesian approach has been separated from "new keynesian macroeconomics". Finally, a new chapter has been added to review the most recent developments in the economic discourse in the light of globalization and the new technological trajectory.

The world's leading scientific thinkers explore bold, remarkable, perilous ideas that could change our lives—for better . . . or for worse . . . From Copernicus to Darwin, to current-day thinkers, scientists have always promoted theories and

unveiled discoveries that challenge everything society holds dear; ideas with both positive and dire consequences. Many thoughts that resonate today are dangerous not because they are assumed to be false, but because they might turn out to be true. What do the world's leading scientists and thinkers consider to be their most dangerous idea? Through the leading online forum Edge (www.edge.org), the call went out, and this compelling and easily digestible volume collects the answers. From using medication to permanently alter our personalities to contemplating a universe in which we are utterly alone, to the idea that the universe might be fundamentally inexplicable, *What Is Your Dangerous Idea?* takes an unflinching look at the daring, breathtaking, sometimes terrifying thoughts that

could forever alter our world and the way we live in it. Contributors include Daniel C. Dennett • Jared Diamond • Brian Greene • Matt Ridley • Howard Gardner and Freeman Dyson, among others
