The ACM Workshop on Security and Privacy in Digital Rights Management is the first scientific workshop with refereed proceedings devoted solely to this topic. The workshop was held in conjunction with the Eighth ACM Conference on Computer and Communications Security (CCS-8) in Philadelphia, USA on November 5, 2001. Digital Rights Management technology is meant to provide end-to-end solutions for the digital distribution of electronic goods. Sound security and privacy features are among the key requirements for such systems. Fifty papers were submitted to the workshop, quite a success for a first-time workshop. From these 50 submissions, the program

committee selected 15 papers for presentation at the workshop. They cover a broad area of relevant techniques, including cryptography, system architecture, and cryptanalysis of existing DRM systems. Three accepted papers are about software tamper resistance, an area about which few scientific articles have been published before. Another paper addresses renewability of security measures. Renewability is another important security technique for DRM systems, and I hope we will see more publications about this in the future. I am particularly glad that three papers cover economic and legal aspects of digital distribution of electronic goods. Technical security measures do not exist in a vacuum and their

effectiveness interacts in a number of ways with the environment for legal enforcement. Deploying security and anti-piracy measures adequately requires furthermore a good understanding of the business models that they are designed to support.

Innovation Management:

Strategies, Concepts and

Tools for Growth and Profit

is a unique book in the rapidly growing discipline of Innovation Management. It

seeks to build on the experience from an earlier discipline—Competitive

Strategy. It took more than two decades for practitioners

to realize that successful strategy is driven by

implementation, not by formulation. Similarly,

successful innovation—the key to growth and

profit—rests on disciplined management and

implementation of the

innovation process from start to finish. This book first

answers the key questions:

Why innovate? How to

innovate? Who innovates? It

then provides 10 essential

and practical tools to help

innovators guide their ideas

to marketplace success.

Following the publication of

the successful first edition,

and in response to many

readers' positive feedback for

its case studies, the second

shows how companies and

individuals can transform

creative ideas into powerful,

sustainable, change-the-world businesses and emphasizes the crucial role of execution in implementing inspiring ideas.

Economics for Lawyers Springer

This book evaluates key commercial law aspects of the relevant law and legislation governing residential mortgage-backed securities (RMBSs) in Australia from a legal perspective. Within the context of a “public benefit test” framework, the book seeks to critically evaluate the impact and effectiveness of current law and regulation governing RMBSs.

There is a dearth of both academic and practical literature on the legal and regulatory issues surrounding RMBSs in Australia.

The book aims to make a contribution to the formulation of law and public policy by suggesting a number of reforms to the current law and practice surrounding RMBSs in Australia.

In part, these suggested reforms will be based on the lessons learned from the experiences of overseas jurisdictions such as

Canada, the U.K, and the United States.

Commercial Law Aspects of Residential Mortgage

Securitisation in Australia

McGraw Hill Professional
Whether dealing with contracts, tort actions, or government regulations, lawyers are more likely to be

successful if they are conversant in economics.

Economics for Lawyers provides the essential tools to understand the economic basis of law. Through rigorous analysis illustrated with simple graphs and a wide range of legal examples, Richard Ippolito focuses on a few key concepts and shows how they play out in numerous applications. There are everyday problems: What is the social cost of legislation enforcing below-market prices, minimum wages, milk regulation, and noncompetitive pricing?

Why are matinee movies cheaper than nighttime showings? And then there are broader questions: What is the patent system's role in the market for intellectual property rights? How does one think about externalities

like airport noise? Is the free market, a regulated solution, or tort law the best way to deliver the "efficient amount of harm" in the workplace?

What is the best approach to the question of economic compensation due to a person falsely imprisoned?

Along the way, readers learn what economists mean when they talk about sorting, signaling, reputational assets, lemons markets, moral hazard, and adverse selection. They will learn a new vocabulary and a whole new way of thinking about the world they live in, and will be more productive in their professions.
