In education, politics and religion, there are strong indications that discourse is becoming marketized. Around the world, government ministries have re-defined themselves as "service providers," universities draw up "market-driven" curricula, job seekers are asked to "package themselves" more effectively, and there are advertising agencies specializing in "the Christian marketplace." And it is not only word choice that is effected; higher-level linguistic patterns, such as genres and discursive practices (such as the text and talk connected with performance measurement and public relations), are also drawn into the orbit of market forces. Through an intricate dialectic, such patterns of linguistic choices, in turn, reinforce the social structures that shape them, further consolidating the marketization process. In a related development, language within the business domain itself is increasingly shaped by strategic planning and control, for example in branding, message design, and the promulgation of management buzzwords.

Marketization thus emerges as a globally unfolding process in which language holds a key position as both cause and effect, and as both subject and object. The book examines these phenomena from a linguistic and critical perspective, drawing on critical discourse analysis, sociological treatises of market society, and critical management studies.

Whether dealing with contracts, tort actions, or government regulations, lawyers are more likely to be successful if they are conversant in economics. *Economics for Lawyers* provides the essential tools to understand the economic basis of law. Through rigorous analysis illustrated with simple graphs and a wide range of legal examples, Richard Ippolito focuses on a few key concepts and shows how they play out in numerous applications. There are everyday problems: What is the social cost of legislation enforcing below-market prices, minimum wages, milk regulation, and noncompetitive pricing? Why are matinee movies cheaper than nighttime showings? And then there are broader questions: What is the patent system's role in the market for intellectual property rights? How does one think about externalities like airport noise? Is the free market, a regulated solution, or tort law the best way to deliver the "efficient amount of harm" in the workplace? What is the best approach to the question of economic compensation due to a person falsely imprisoned? Along the way, readers learn what economists mean when they talk about sorting, signaling, reputational assets, lemons markets, moral hazard, and adverse selection. They will learn a new vocabulary and a whole new way of thinking about the world they live in, and will be more productive in their professions.

In Third Party Funding, Gian Marco Solas, for the first time, describes third party funding (TPF) as stand-alone

practice within the wider litigation and legal markets. The book reports on legal issues related to TPF in both common law and civil law jurisdictions, and in the international context. It then discusses the incentives and economics of TPF transactions in different legal contexts while explaining how the practice emerged and how it is likely to develop. In addition, the book offers practical insights into TPF transactions and analyzes a number of regulatory proposals that could affect its use and desirability. The biopharmaceutical industry has been a major driver of technological change in health care, producing unprecedented benefits for patients, cost challenges for payers, and profits for shareholders. As consumers and companies benefit from access to new drugs, policymakers around the globe seek mechanisms to control prices and expenditures commensurate with value. More recently the 1990s productivity boom of new products has turned into a productivity bust, with fewer and more modest innovations, and flat or declining revenues for innovative firms as generics replace their former blockbuster products. This timely volume examines the economics of the biopharmaceutical industry, with eighteen chapters by leading academic health economists. Part one examines the economics of biopharmaceutical innovation including determinants of the costs and returns to new drug development; how capital markets finance R&D and how costs of financing the biopharmaceutical industry compare to financing costs for other industries; the effects of safety and efficacy regulation by the Food and Drug

Administration (FDA) and of price and reimbursement regulation on incentives for innovation; and the role of patents and regulatory exclusivities. Part two examines the market for biopharmaceuticals with chapters on prices and reimbursement in the US, the EU, and other industrialized countries, and in developing countries. It looks at the optimal design of insurance for drugs and the effects of cost sharing on spending and on health outcomes; how to measure the value of pharmaceuticals using pharmacoeconomics, including theory, practical challenges, and policy issues; how to measure pharmaceutical price growth over time and recent evidence; empirical evidence on the value of pharmaceuticals in terms of health outcomes; promotion of pharmaceuticals to physicians and consumers; the economics of vaccines; and a review of the evidence on effects of mergers, acquisitions and alliances. Each chapter summarizes the latest insights from theory and recent empirical evidence, and outlines important unanswered questions and areas for future research. Based on solid economics, it is nevertheless written in terms accessible to the general reader. The book is thus recommended reading for academic economists and non-economists, and for those in industry and policy who wish to understand the economics of this fascinating industry.

The chapter authors are uniquely qualified to provide this perspective: all are higher education researchers who have received graduate training in economics and have substantial experience working directly in institutional research. The chapters in this volume focus on the economist's perspective on education costs and revenues, how economics can inform enrollment management efforts, and how institutional researchers can use economics to understand labor market issues for faculty. This is the 132nd issue of *New Directions for Institutional Research*, a quarterly journal published by Jossey-Bass. This book examines de facto regulation frameworks and methods in a variety of areas, such as banking, transportation, cyberspace, the non-profit sector, and more. Authored by experts in the field, this book deals with the "big" questions about the idea of regulation. It reveals the tentativeness of current regulatory schemes, the difficulties in balancing between the shared objective of protecting the public interest and other interests such as market stability, and promoting competition. The case studies point to the need for better planning and for more coherent policies. This collection offers to students of public policy, management and law, policy makers and practitioners a broad spectrum of insights—theoretical and practical—and contributes to the ongoing deliberations on the ways that regulatory arrangements could serve the public interest more efficiently.

Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's *Microeconomics* bridges the gap between today's theory and practice, with a strong empirical dimension that lets students test theory and successfully apply it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two critical questions students ask, "Do people and firms really act as theory suggests?" and "How can someone use microeconomics in a practical way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.
