Russell Cooper and Andrew John have written an economics text aimed directly at students from its very inception. You're thinking, "Yeah, sure. I've heard that before." This textbook, Economics: Theory Through Applications, centers around student needs and expectations through two premises: Students are motivated to study economics if they see that it relates to their own lives. Students learn best from an inductive approach, in which they are

first confronted with a problem, and then led through the process of solving that problem. Many books claim to present economics in a way that is digestible for students; Russell and Andrew have truly created one from scratch. This textbook will assist you in increasing students' economic literacy both by developing their aptitude for economic thinking and by presenting key insights about economics that every educated individual should know. How? Russell and Andrew have done three things in this text to accomplish that goal: Applications Ahead of Theory: They present all the theory that is standard in Principles books. But by beginning with applications, students get to learn why this theory is needed. Learning through Repetition: Important tools appear over and over again, allowing students to learn from repetition and to see how one framework can be useful in many different contexts. A Student's Table of Contents vs. An Instructor's Table of Contents: There is no further proof that Russell and Andrew have created a book aimed specifically at educating students about economics than their two tables of contents.

This book is intended to be a comprehensive and standard textbook for undergraduate students of Microeconomics. Apart from providing students with sufficient study material for examination purpose, it aims at making them understand economics. An effort has been made to explain abstract and complex microeconomic theories in a simple and lucid language without sacrificing analytical sophistication. The subject matter has been structured in a systematic manner without leaving gaps for the readers to fill in. Though the approach is non-mathematical, simple algebra has been used to give a concrete view of economic concepts and theories and to show the applicability of economic theories in decision making.

This book presents a scientific and systematic development of the underlying concepts of microeconomics, with due emphasis on analytical and mathematical treatment of the discipline, so that the students develop skills to apply these concepts, in the light of current developments, to real-world problems. The book is organized into four units. The first unit is an introduction to the study of the science of economics. It defines the central problems of economics and outlines the tools to solve them. The students are introduced to the meaning and role of Production Possibility Curves to solve application-oriented problems in economics. The second unit gets students started on the study of microeconomics. It explains interaction of demand and supply curves and concept of equilibrium price. The factors affecting elasticity of demand and supply are discussed. This unit also looks at behaviour of consumers and explains several tools used to analyse demand. The third and fourth units elucidate the factors of production, the theory of costs and revenue, different forms of markets, and price-output determination in competitive markets. Though the book is primarily intended for undergraduate and postgraduate students of economics and commerce, it would be immensely useful to management students as well. KEY FEATURES Over 250 neatly drawn figures to clarify the concepts. Chapter-end summaries as ' Key Terms and Concepts ' to facilitate quick revision. Chapter-end short and long type questions of numerical and analytical nature with hints and answers as appropriate to probe the student ' s understanding of the material covered. Numerous illustrative examples throughout the text to illustrate the application of

concepts. Two case studies to encourage application orientation among the students.
