Useful business analysis requires you to effectively transform data into actionable information. This book helps you use SQL and Excel to extract business information from relational databases and use that data to define business dimensions, store transactions about customers, produce results, and more. Each chapter explains when and why to perform a particular type of business analysis in order to obtain useful results, how to design and perform the analysis using SQL and Excel, and what the results should look like.

PC Mag Documentation for Ancient  
Arabia This new volume provides an  
indispensable guide to the proliferating  
bibliography (often hard of access) of  
several thousand Ancient Arabian

inscriptions through one-and-a-half  
millennia (c. 1000 BC to c. 570 AD), mainly  
in South Arabia, but including also some  
monumental texts from NW Arabia and  
others from E Arabia. The Bibliography  
offers important information on each  
principal text (all sigla by which each is  
named, with ample cross-references;  
location, date, nature, besides the vital list of  
publications in which each appears). A  
comprehensive but compact set of charts  
provides a basic palaeography, to help in  
the dating of texts that lack a royal name.  
Updates are given for the chronology, king-  
lists, and lists of sources in Volume 1, and  
(to complement the minimal dates in that  
work) fresh maximal dates for those wishing  
to base their dates on the supposed Assyrian

Conservation research in libraries is a  
rapidly growing field. This book places  
analysis within its context in  
conservation and provides examples of  
how this expensive resource can be used.  
Through a series of case studies, it  
describes major analytical procedures,  
including visualization, molecular,  
elemental and separation techniques as  
well as chemical tests. It is thus a  
suitable reference work for library  
conservators and curators. Please note:  
Despite careful production of our books,  
sometimes mistakes happen.  
Unfortunately, the authorship for some  
chapters wasn't correct in the original

publication. Chapter 5 was written by  
Andrew Beeby and David Howell as co-  
author, chapter 6 by Kelly Domoney and  
David Howell as co-author, and chapter 9  
is authored by Anita Quye. This will be  
corrected. We apologize for the mistake.  
Documentation Abstracts  
This book was written to help  
introductory biology teachers gain a basic  
understanding of contemporary  
bioinstrumentation and the uses to which  
it is put in the laboratory. It includes  
topics that are most basic to  
understanding the nature of biology. The  
book is divided into five sections: (1)  
"Separation and Identification" that  
includes chapters on electrophoresis,  
chromatographic techniques, immunologic  
methods, flow cytometry, and  
centrifugation of biomolecules; (2)  
"Observation" that includes chapters on  
advances in light microscopy,  
transmission electron microscopy, and  
scanning electron microscopy; (3)  
"Spectroscopy" that includes chapters on  
absorption spectroscopy, fluorescence  
spectroscopy, cross-sectional medical  
imaging, and infrared spectroscopy; (4)  
"Biological Tracing and Sensing" that  
includes a chapter on radionuclides; and  
(5) "Manipulation of Biological Molecules"  
that includes chapters on recombinant  
DNA, the polymerase chain reaction, and

restriction fragment length  
polymorphisms. Chapter overviews,  
concept maps, margin notes, photos of  
real scientists and their students,  
overhead transparency masters, and an  
Internet bioinstrumentation web site  
directory are also included. (JRH)
