Research in English and Applied Linguistics (REAL) Vol 1: Action, Not Words!!!
Microsoft Press

This book presents a complete survey of the computer technologies necessary for achieving basic technology literacy. It provides a strong foundation by giving the reader the background needed to make smart buying decisions about computer technology. It then gives a description of the hardware that is the foundation of all of the technologies used every day, whether it's a laptop, personal computer, smartphone, or other digital device. From there, it explains how the Internet actually works. It then guides the reader through engaging, step-by-step tutorials on how to use the Windows 7 operating system and the popular Office 2010 productivity tools, including Word, Excel, and Powerpoint. The book is written in a conversational and engaging style. At the end of each chapter, there are review questions, and a project to apply what has been learned. --

Professional Microsoft PowerPivot for Excel and SharePoint Cengage Learning

Foundation of Information Technology MS Office Class 09 Cengage Learning

This open access book summarizes the first two decades of the NII Testbeds and Community for Information access Research (NTCIR).

NTCIR is a series of evaluation forums run by a global team of researchers and hosted by the National Institute of Informatics (NII), Japan.

The book is unique in that it discusses not just what was done at NTCIR, but also how it was done and the impact it has achieved. For example, in some chapters the reader sees the

early seeds of what eventually grew to be the search engines that provide access to content on the World Wide Web, today's smartphones

that can tailor what they show to the needs of their owners, and the smart speakers that enrich our lives at home and on the move. We

also get glimpses into how new search engines can be built for mathematical formulae, or for the digital record of a lived human life. Key to

the success of the NTCIR endeavor was early recognition that information access research is an empirical discipline and that evaluation

therefore lay at the core of the enterprise. Evaluation is thus at the heart of each chapter

in this book. They show, for example, how the recognition that some documents are more

important than others has shaped thinking about evaluation design. The thirty-three contributors to this volume speak for the many

hundreds of researchers from dozens of countries around the world who together shaped NTCIR as organizers and participants.

This book is suitable for researchers, practitioners, and students--anyone who wants to learn about past and present evaluation

efforts in information retrieval, information access, and natural language processing, as well as those who want to participate in an evaluation task or even to design and organize

one. Next Generation Search Engines: Advanced Models for Information Retrieval New Saraswati House India Pvt Ltd

Office 2010 Library All About Resources Foundation of Information Technology is a judiciously developed series of textbooks on the syllabus devised by the Central Board of Secondary Education for classes 9 and 10. Keeping in mind the grasping power of the students, the books focus on the relevant theory and its applications and practical learning through sequential steps, rather than the elaborate textual study for chapters. Each book is divided into chapters that are self-explanatory and encompass the relevant concepts of the topic concerned. The books do not contain any repetitive content and hence are crisp and condensed. The exercises at the end of the chapters call for active and attentive participation of the learners thereby testing their knowledge and helping in self-assessment. The CCE format of the questions appearing in CBSE exam papers has been followed in developing exercises in the book. There are separate books on MS Office 2010 and OpenOffice in class 9.
